CE This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers™ Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by ⚠ Electromagnetic Compatibility (EMC).

General Description

Vickers by Danfoss KBDG5V-5/7/8/10 are solenoid operated directional control, non-feedback type proportional valves.

These are two-stage proportional directional control valves in which the main-stage spool is positioned according to the output from an integrally mounted proportional, solenoid-operated, pressure-reducing valve. Direction of main-spool travel depends upon which of the two solenoids of the pilot

Valve is energized and the amount of travel is dependent upon the current input to the solenoid.

At any intermediate position of the main spool, a force balance exists between the controlled, reduced pilot pressure acting on the spool end and the opposing centering spring, plus the action of flow forces. There is no electrical feedback of the main-stage spool position.

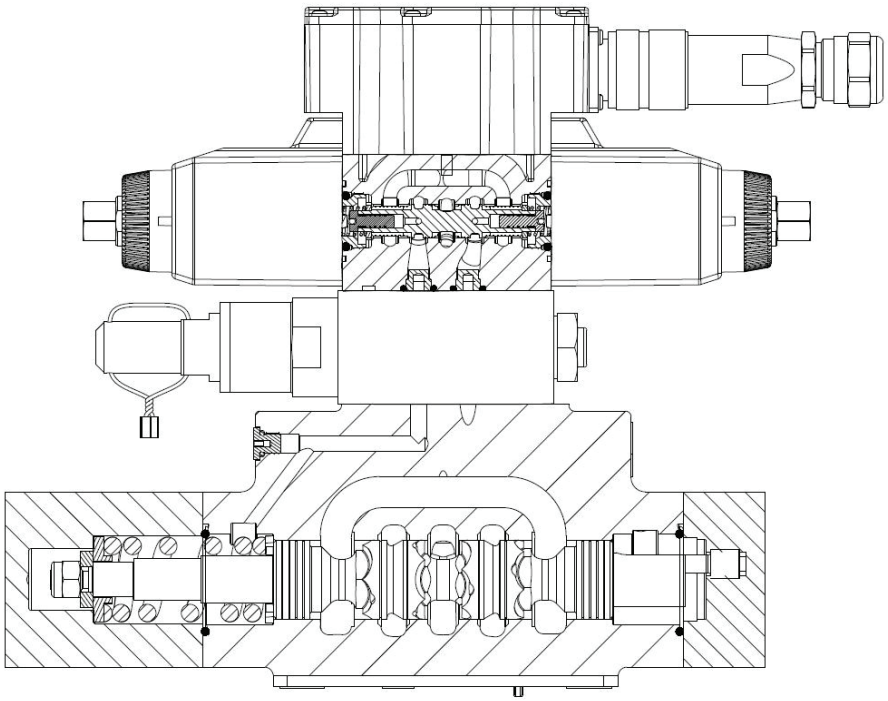

This range of valves offers effective and economic solutions for applications having repetitive load conditions throughout each operating cycle, e.g. mold closure /opening in plastics molding machinery.

Standard Features and Benefits

- These global products, manufactured to world-class quality standards, are sold and serviced throughout the world.
- These valves open up expanded application opportunities as a cost effective alternative to feedback-type proportional and servo valves.
- Auxiliary DIN-rail mounted function modules available.

Model Codes (cont.)

9 Pilot Supply

Models without integral, fixed pilot pressure reducer module

E	External pilot supply
Blank	Internal pilot supply

Models with integral, fixed pilot pressure reducer module

X	Internal pilot supply
EX	External pilot supply

For system pressures less than 200 bar (2900 psi) the pilot pressure reducing module is optional.

For system pressures above 200 bar (2900 psi) the pilot pressure reducing module must be fitted.

10 Pilot Drain

T	Internal pilot drain
Blank	External pilot drain

11 Manual Override

Blank	Plain overrides
H	Water-resistant overrides
Z	No overrides

12 Electrical Command Option

1	–	+/- 10V control signal
2	–	4-20 mA control signal

13 Electrical Connection

PC7	–	7 pin connector without plug supplied
PE7	–	7 pin connector with plug supplied
PH7	–	As PE7 but with pin “C” used for enable signal
PR7	–	As PC7 but with pin “C” used for enable signal

14 Coil Identification

H	–	24V

15 Design Number, 10 Series

Subject to change. Installation dimensions unaltered for design numbers 10 to 19 respectively. Design 20 only for KBDG5V-7

Warning

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened to 2-2,5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

Spool Data

Spool Types and Flow Ratings

Symmetric Spools

Flow ratings for flow through P-A-B-T at Δp = 5 bar (72 psi) per flow path, e.g. P-A, or B-T. For other pressure drop values see “Flow Gain” curves on pages 10 and 11.

SPOOL CODE	MAIN STAGE SPOOL SYMBOL	FLOW RATING
For KBDG5V-5 valves:		
2C90N	2C	90 L/min (24 USgpm)
33C80	33C	80 L/min (21 USgpm)
For KBDG5V-7 valves:		
2C230N	2C	230 L/min (61.3 USgpm)
33C230N	33C	230 L/min (61.3 USgpm)
336C185N	36C	185 L/min (49.3 USgpm)
For KBDG5V-8 valves:		
2C330N	2C	330 L/min (88 USgpm)
33C330N	33C	330 L/min (88 USgpm)
For KBDG5V-10 valves:		
2C550N	2C	550 L/min (145 USgpm)
7C550N	7C	550 L/min (145 USgpm)
12C550N	12C	550 L/min (145 USgpm)
33C550N	33C	550 L/min (145 USgpm)

Asymmetric Spools

Figure preceding metering type designator, “N” (e.g. 2C***N) is flow rating P-A, or A-T (“A” port flow); figure after “N” (N***) is flow rating P-B, or B-T (“B” port flow).

For models without reducing module, deduct 1,2 kg (2.6 lb)		
Ramp time		0-12 sec for full step input (0-100%)
Relative duty factor		Continuous rating (ED = 100%)
Hysteresis with flow through P-A-B-T		<8% of rated flow

Performance Characteristics

Data is typical with fluid at 36 cSt (168 SUS) and 50˚C (122˚F).

Minimum Pressure

KBDG5V-5/7/8
For full flow performance, pilot pressure ≥45 bar (650 psi).

KBDG5V-10
For full flow performance, pilot pressure ≥28 bar (405 psi).

i.e.

Pressure at port P for internal pilot supply.

or

Pressure at port X for external pilot supply.

Pilot Drain Application Notes

External pilot drain is the recommended configuration.

Internal pilot drain is possible where a stable "T" port pressure, not exceeding 8 bar (116 psi), can be guaranteed.

WARNING

Any pressure surges at the "T" port (drain) will cause the main spool to move and change the valve output. This possibility is eliminated by the use of an external drain.

Maximum Pressures, bar (psi)
For models without integral pilot pressure reducer

MODEL	PILOT PRESSURE SOURCE	MODEL CODE 7	PORTS P, A, B	T	X	Y †
KBDG5V-**5**	External	E	315 (4500)	210 (3000)	200 (2900)	8 (116)
	Internal	Omit	200§ (2900)	210 (3000)	■	8 (116)
KBDG5V-**7/8**	External	E	350 (5000)	350 (5000)	200 (2900)	8 (116)
	Internal	Omit	200§ (2900)	350 (5000)	■	8 (116)
KBDG5V-**10**	External	E	350 (5000)	350 (5000)	40 (580)	8 (116)
	Internal	Omit	40 (580)	350♦ (5000)	■	8 (116)

For models with integral pilot pressure reducer

KBDG5V-**5**	External	EX	315 (4500)	210 (3000)	315 (4500)	8 (116)
	Internal	X	315 (4500)	210 (3000)	■	8 (116)
KBDG5V-**7/8**	External	EX	350 (5000)	350♣ (5000)	315 (4500)	8 (116)
	Internal	X	350 (5000)	350♣ (5000)	■	8 (116)
KBDG5V-**10**	External	EX	350 (5000)	350♦ (5000)	315 (4500)	8 (116)
	Internal	X	350 (5000)	350♦ (5000)	■	8 (116)

■ When using internal pilot pressure, port X should be plugged at the subplate or manifold face (e.g. manifold not drilled for connection to port X).

§ The maximum pressure for ports A and B is: 315 bar (4500 psi) for size 5; 350 bar (5000 psi) for sizes 7 and 8.

† See "Pilot Drain Application" note.

♦ Pilot must be externally drained, otherwise "Y" port pressure applies.

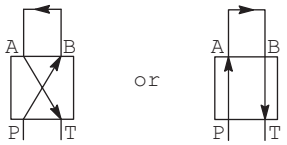

♣ Pilot must be externally drained, otherwise "T" port pressure limited to 210 bar (3000 psi).

Command = Volts (±10V)	**Pin D**	**Pin E**	
	Positive	0V	P to A
	0V	Negative	
	V_D - V_E = Positive		
	Negative	0V	P to B
	0V	Positive	
	V_D - V_E = Negative		

Command =	**Pin D**	**Pin E**	**Pin B**	**Flow direction**
Current (4-20 mA)	More than 12 mA	Current GND	Current return	P to A
	Less than 12 mA	Current GND	Current return	P to B

▲ In valves with PH7 or PR7 type electrical connection.

Warning

All power must be switched off before connecting or disconnecting any plugs.

Wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See this leaflet and Installation Wiring Practices for Vickers™ Electronic Products leaflet 2468. Recommended cable sizes are:

Power Cables

For 24V supply:
0,75 mm^2 (18 AWG) up to 20m (65 ft)
1,00 mm^2 (16 AWG) up to 40m (130 ft)

Signal Cables

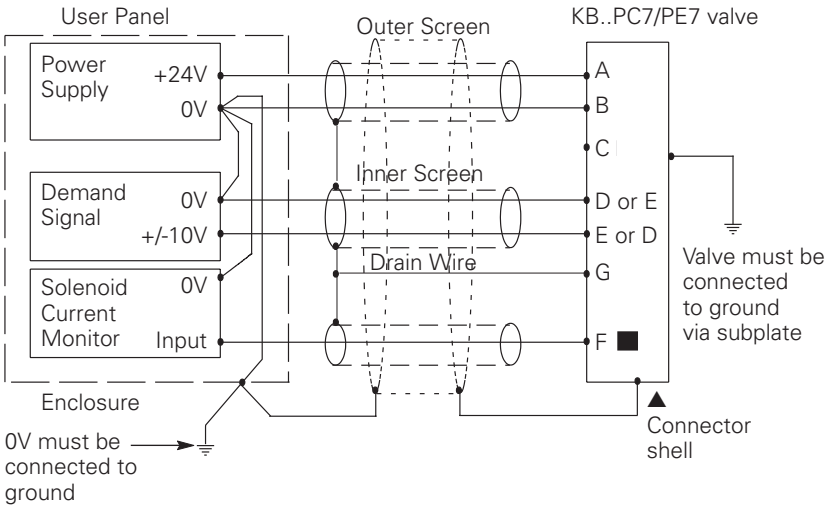

0,50 mm^2 (20 AWG)

Screen (Shield)

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen. Cable outside diameter 8,0-10,5 mm (0.31- 0.41 inches). See connection diagrams on next page.

Voltage input (M1) wiring

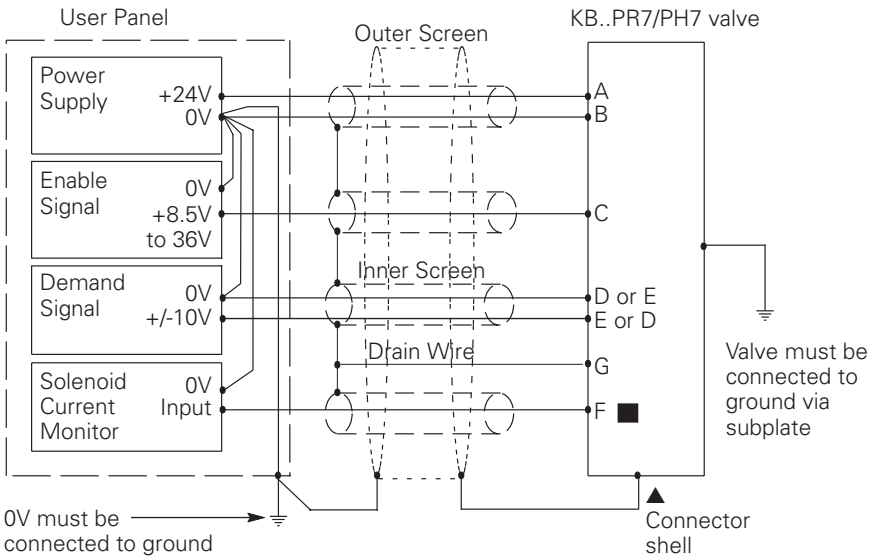

Spool position monitor voltage (pin F) will be referenced to the KB valve local ground.

Wiring Connections for Valves with “Enable” Feature

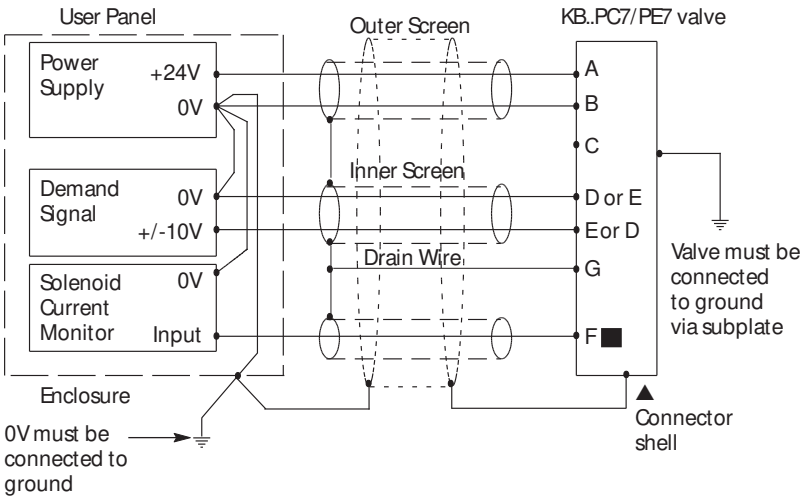

▲ Note:

In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7 pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

Current input (M2) wiring

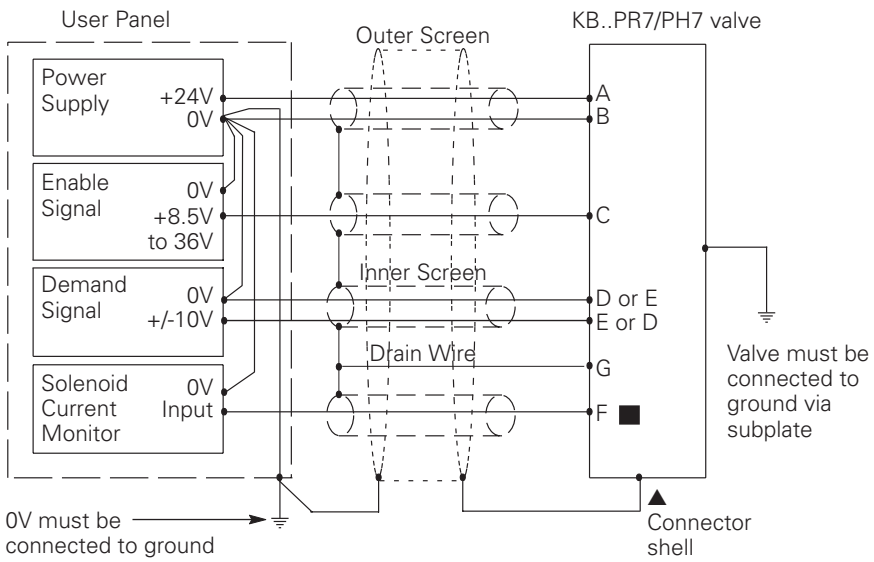

Spool position monitor voltage (pin F) will be referenced to the KB valve local ground.

Wiring connections for M2 valves with enable feature

▲ Note:

In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7 pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

Warning

Electromagnetic Compatibility (EMC) It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. The metal 7 pin connector part no. 934939 should be used for the integral amplifier. In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference. It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines. The enable line to pin C should be outside the screen which contains the demand signal cables.

Application Data

Fluid Cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in publication 9132 or 561, “Guide to Systemic Contamination Control”. The book also includes information on the concept of “ProActive Maintenance”. The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm.

For products in this catalog the recommended levels are:
0 to 70 bar (1000 psi)..18/16/13
70+ bar (1000+ psi)...17/15/12

Vickers™ products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed above. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

Hydraulic Fluids

Materials and seals used in these valves are compatible with antiwear hydraulic oils, and with non-alkyl-based phosphate esters.

The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

Installation

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

Mounting Bolt Kits

For KBDG5V-5
BK02-156493M (metric)
BK590720 (inch)

For KBDG5V-7
BKDG7M (metric)
BK590724 (inch)

For KBDG5V-8
BKDG8-655M (metric)
BKDG06-635 (inch)

For KBDG5V-10
BKDG10636M (metric)
BKDG10636 (inch)

If not using recommended Vickers™ bolt kits, bolts used should be to ISO 898, 12.9 or better.

For further technical information about fluids see “Technical Information” leaflet B-920 or I-286S.

Mounting Bolt Torques

Recommended torques with threads lubricated

For KBDG5V-5
M6 or 1/4”-20 UNC bolts:
To 210 bar (3000 psi) 14 Nm (10.3 lbf ft)
To 310 bar (4500 psi) 20 Nm (14.75 lbf ft)

For KBDG5V-7
M10 or 3/8”-16 UNC bolts:
49 to 59 Nm (36 to 43 lbf ft)
plus
M6 or 1/4”-20 UNC bolts
9 to 14 Nm (6.6 to 10.3 lbf ft)

For KBDG5V-8
M12 or 1/2"-13 UNC bolts
103 to 127 Nm (76 to 93 lbf ft)

For KBDG5V-10
M20 or 3/4”-10 UNC-2B bolts
185-220 Nm (250-300 lbf ft)

Seal Kits (Mainstage Only)

KBDG5V-5.....565143
KBDG5V-7.....6048718-001
KBDG5V-8.....02-352520
KBDG5V-10.....02-329888

Plugs

7-pin plug (metal) 934939
(Metal plug must be used for full EMC protection)

Note: An alternative metal connector which gives EMC protection but not IP67 rating is available from ITT-Cannon, part number CA06-COM-E-14S-A7-P.

Service Information

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is recommended that if any mechanical or electronic repair is necessary, valves should be returned to the nearest Danfoss Hydraulics repair center. The products will be refurbished as necessary and retested to specification before return.

Field repair is restricted to the replacement of the seals.
