Introduction to Cartridge Valves

Design Concept

Poppet type valves have been used in hydraulic systems for many years. They are commonly known as two-port check valves. In this form, they serve as a one-way valve, allowing free flow in one direction while blocking flow in the reverse direction. With some refinements, these valves can be controlled to overcome the normal blocking action, thereby allowing control of flow in both directions. This is the basis of the control concept known as cartridge valves.

Refinements in hydraulic system development have led to greater use of manifold block construction. Block systems eliminate a multitude of interconnecting lines between components, thereby virtually eliminating potential leakage points and related oil waste. Inserting the active element of cartridge valves into standardized cavities in the manifold, and retaining this insert by a passive block (cover), completes the cartridge valve concept.

Vickers by Danfoss New Design

Vickers by Danfoss valves are defined as slip-in cartridge valves to differentiate them from another type known as screw-in. Generally, slip-in valves are associated with relatively high flows, i.e. 150 L/min (40 USgpm) or more. Slip-in cartridge valves, which will henceforth be referred to simply as cartridge valves in this catalog, are targeted at more efficient, faster and more compact hydraulic has developed its cartridge valve system technology to meet the changing needs of new generations of hydraulically operated machinery and equipment. Today's machines need controls that are exceptionally cost effective and energy efficient. Vickers by Danfoss cartridge valves fulfill these needs.

Cartridge Valve Advantages

- System design flexibility
- Lower installed cost
- Smaller package size
- Better performance and control
- Improved reliability
- Higher pressure capability
- More efficient operation
- Elimination of external leakage and reduction of internal leakage
- Greater contamination tolerance
- Faster cycle times

System Design Considerations

Cartridge valves offer an alternative rather than a replacement for conventional sliding spool valves. Often, the most economical system incorporates combinations of manifold mounted spool valves and screw-in and slip-in cartridge valves. Engineers faced with a system design problem should consider all possibilities before deciding on a particular solution. Cartridge valve systems will become more cost effective if some of the following design parameters are significant.

- Flow rates exceeding 150 L/min (40 USgpm)
- Working pressure above 210 bar (3000 psi)
- Small envelope size
- Complex circuitry
- Fast response
- Low internal leakage
- Good stability
- Low noise level

Because cartridge valves are two-position valves, a single valve can control flow between only two major flow points in a system. Thus, for example, four cartridge valves are required to replace a typical three position, four-way spool valve (Figure 1). Operating characteristics of cartridge valves can be altered easily to fine tune the motions of a machine. For instance, a cartridge cover can be changed to control poppet time and travel, thus controlling actuator acceleration and speed. Shock is easily avoided by carefully sizing orifices in the valve cover and by timing the opening and closing sequence of individual cartridges. In conventional spool type valves, timing of the opening or closing of all four ports occurs simultaneously with less ability to avoid shock.

Conventional spool valves must be sized for the highest flow at any one port. When differential-area cylinders are used, a spool valve would probably be sized for the return flow rate out of the head end of the cylinder. Cartridge valves, on the other hand, are sized to handle only the flow required through their individual ports. Economies are realized and the system is optimized. Cartridge valves are compatible with computer or programmable controls via electrically modulated pressure and flow control models. Simple on-off solenoid pilot controls, as well as air operated types, are also available. The Vickers by Danfoss soft shift pilot valves DG4V-3-****2** (Catalogue ref - BC427967366368en-000102) can also be used to achieve smooth opening and closing.

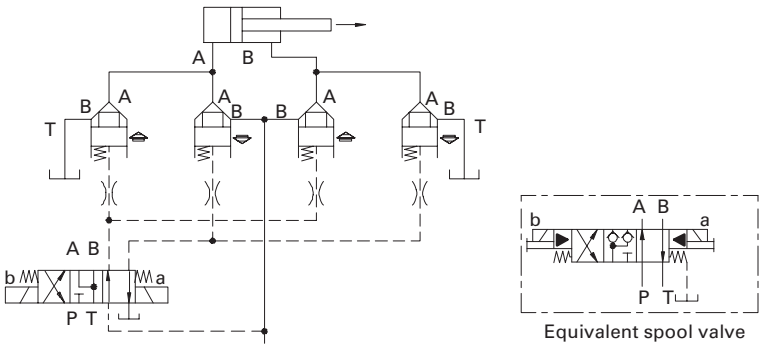

Figure 1

Features and Benefits

Features	Benefits
Positive-seating check type valving mechanism	• Minimum internal valve leakage with little energy waste. • Improved control of load holding enhances machine performance. • Higher flow capacity results in more economical valve sizing. (Check type valve opening area is greater than that of equal port size spool valves.) • Lower pressure drops with less heat generation provide greater machine efficiency. • Faster response – up to four times faster than spool type valves – allows faster machine cycling for greater productivity. Flow begins as soon as the cartridge check type valve poppet lifts off its seat. (Spool valves must clear their overlap before flow begins.)
Individual port control	• Each cartridge can be tuned to reduce system shock, resulting in smoother machine operation. • Each cartridge in a system can be sized for the actual flow encountered, optimizing component size and cost. (Spool valves must be sized for the maximum flow seen at any of their ports.) This is a refinement over spool type valves wherein all ports are affected simultaneously by spool movement, and the demands of one port compromise the others.
Cartridges combine functions of direction, flow and/or pressure	• Multi-function reduces the number of valving components required, resulting in lower machine costs.
Manifold block assemblies that are compact, neat and low in weight	• Machine system installation is easier and faster, thereby reducing assembly costs. • Piping can be eliminated, providing leak free construction. • Cartridges can be easily serviced without disturbing system piping, thereby increasing machine uptime and reducing maintenance time and costs.
Headloss	• Vickers by Danfoss “best in class” cartridge valves offer more power efficiency.
Flexibility	• Components can be individually matched to system requirements.
Serviceability	• System can be easily serviced as all valves are surface mounted.
Reliability	• Cartridge technology proven over several decades of use. • Vickers by Danfoss valves undergo fatigue and endurance tests before release. • 420 bar (6090 psi) rating.
Conformity	• RoHS Directive - 2011/65/EU • REACH Regulation
$MTTF_D$	• 150 years as per ISO 13849

Note – Covers with size 03 pilot interface operated at 420 bar (6090 psi) require a pilot valve rated at minimum 420 bar (6090 psi)

Cartridge Valve Design

Construction

Vickers by Danfoss cartridge valves are similar to poppet check valves and consist of an insert assembly that slips into a cavity machined into a manifold. This cavity is made to ISO 7368 or to DIN 24342. The insert is retained in the cavity by a control cover which is bolted to the manifold. The insert consists of a sleeve, poppet, spring and seals. Typically, inserts and covers are supplied separately, e.g. insert model CVI-**-D10 and cover model CVCS-**-C (relief valve) shown in Figure 2. For some functions, inserts and covers are supplied as a unit (complete assembly); e.g. the CVU-**-EFP1 (proportional throttle) shown on page 87.

Drilled holes in the manifold connect insert main ports A and B to other cartridges or to the operating hydraulic system. Similarly, drilled control lines in the manifold interconnect control ports X, Z1, and Z2 as desired, see page 123 for port locations to ISO 7368. Drain port Y is always connected directly to the reservoir.

Three different spring rates provide a selection of insert poppet cracking pressures. The control cover can also contain a manual adjustment for limiting poppet lift and flow rate. Provision is made for the fitting of various orifices to optimize or tune cartridge valve response in relation to that of the complete hydraulic system. Some covers have an ISO 4401 size 03 (ANSI/B93.7M-D03) interface for integrally mounting a pilot directional, or pressure, control valve, (metric thread mounting bolts). Control functions can be expanded by adding control modules between the pilot valve and the cover.

Typical single cartridge arrangements are symbolized on the following pages. Your Danfoss representative can illustrate various grouped arrangements. Grouping cartridge assemblies for control by one or more common pilot valves can provide directional, check, pressure and/or flow restrictor functions for flow rates up to 5500 L/min (1450 USgpm) per cartridge.

Functions

Cartridge valves for directional and check functions are essentially hydraulically piloted check valves. Cartridge relief valves feature manual pressure setting adjustment. Additionally, venting and remote piloting are possible. Alternative arrangements include electrical selection of pressure or venting, and of dual pressure settings and venting, via a pilot valve mounted to the cartridge cover. Electrohydraulic proportional control of pressure is also available.

Relief valve arrangements described in this catalog can be built into system manifold assemblies in combination with directional flow regulating and pressure reducing functions in cartridge form. The basic pressure reducing cartridge arrangement features manual adjustment of reduced pressure, plus a pilot port for optional remote control. Options include electrical selection of high and low pressures, and electrohydraulic proportional control of reduced pressure.

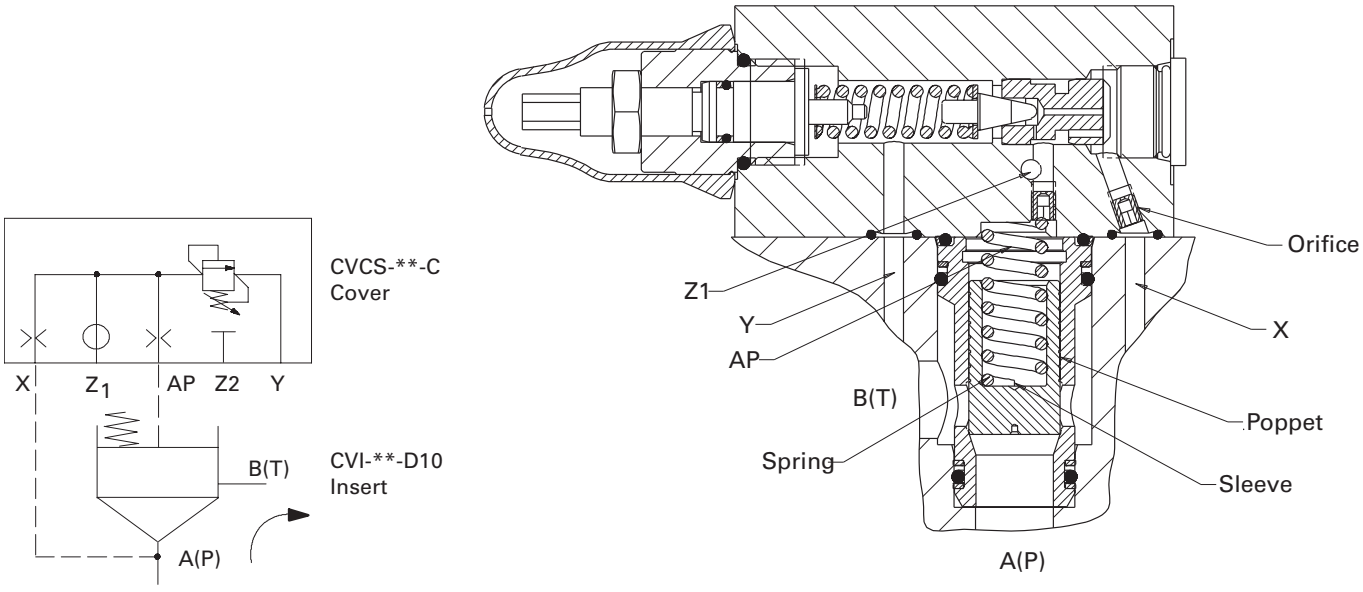

Figure 2

Poppet Area Ratios

A cartridge valve is simply a two-port valve that blocks flow, allows free flow, or modulates flow or pressure. A basic cartridge valve insert, Figure 3, consists of a sleeve, spring, and poppet. The insert has three areas, identified as AA, AB and AAP , that affect the opening or closing of the valve poppet relative to the seat in the sleeve. The A-port area is the circular area defined by the seat diameter. The B-port area is the annular area between the seat and the outside diameter of the poppet. Area AP is the circular area defined by the diameter of the poppet. Pressure on the AP area, plus the spring force, holds the poppet against the seat. Pressure on the AA and AB areas tends to lift the poppet off the seat, allowing flow through the valve.

A = Main port

B = Main port

AP = Spring chamber

$\mathbf{A_A}$ = Effective area of port A

$\mathbf{A_B}$ = Effective area of port B (annular)

$\mathbf{A_{AP}}$ = Area related to poppet diameter

The valve opens and closes in accordance with the force balance formula:

$$\mathbf{(P_{AP}xA_{AP})+F_S-(P_AxA_A)-(P_BxA_B)-F_f}$$

< 0 . . . . . Valve opens

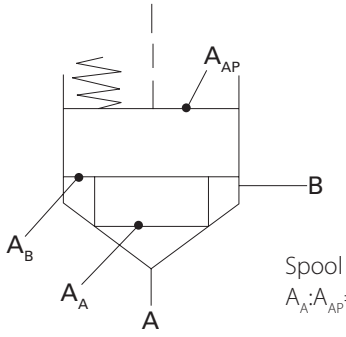

> 0 . . . . . Valve closes

Where:

$\mathbf{F_S}$ = Spring force
$\mathbf{F_f}$ = Flow force

Referring to a 1:1.5 poppet area ratio (AA:AAP), Figure 4, the poppet will remain closed, thereby blocking flow between ports A and B as long as pressure in area AAP, plus the spring force, exceeds pressure on either area AA, annulus AB, or their combined effect. Flow force (Ff) plays a role when the valve is open, but will not be covered in this catalog.

Graphic Symbol

Spool area ratio
A_A:A_{AP}=1:1.5

Figure 4

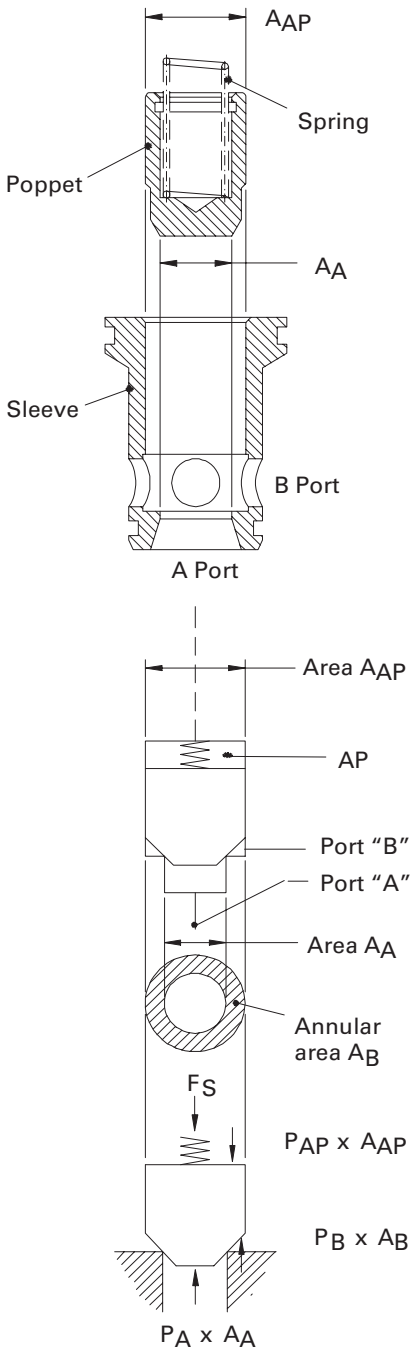

Figure 3

Poppet Area Ratios

Vickers by Danfoss range of cartridge valves includes five operating area ratios:

- 1:2 area ratio, where AAP is 2 x the A-port area, and ports A and B areas are equal. This valve is used primarily for directional control.
- 1:1.5 area ratio, where A_{AP} is 1.5 x the A-port area. This valve is used primarily for directional control.
- 1:1.05 area ratio, where A_{AP} is 1.05 x A-port area. This valve is used for directional control or pressure control.
- 1:1 area ratio, where A_{AP} equals the A-port area and the B-port area is zero. This valve is used for pressure control.

Figure 5 shows area ratio relationships, associated hydraulic symbols, and related model codes.

The reducer insert, Figure 6 and Figure 7, differs from other inserts in that it has a spool type valving mechanism, rather than poppet type, and has an integral check valve to relieve surge pressures in the reduced pressure A (load) port. The reducer insert is available normally open and normally close configurations. The normally closed i.e. the spool tends to widen the hole opening in the sleeve with increased load pressure at port A. Flow is always from port B to port A. The normally open i.e. spool tends to close the hole opening in the sleeve with increased load pressure of port A. Flow is always from port B to port A.

Unlike most reducing valves, pilot pressure is obtained from high-pressure port B rather than from reduced pressure port A, thus providing significantly more flow capacity.

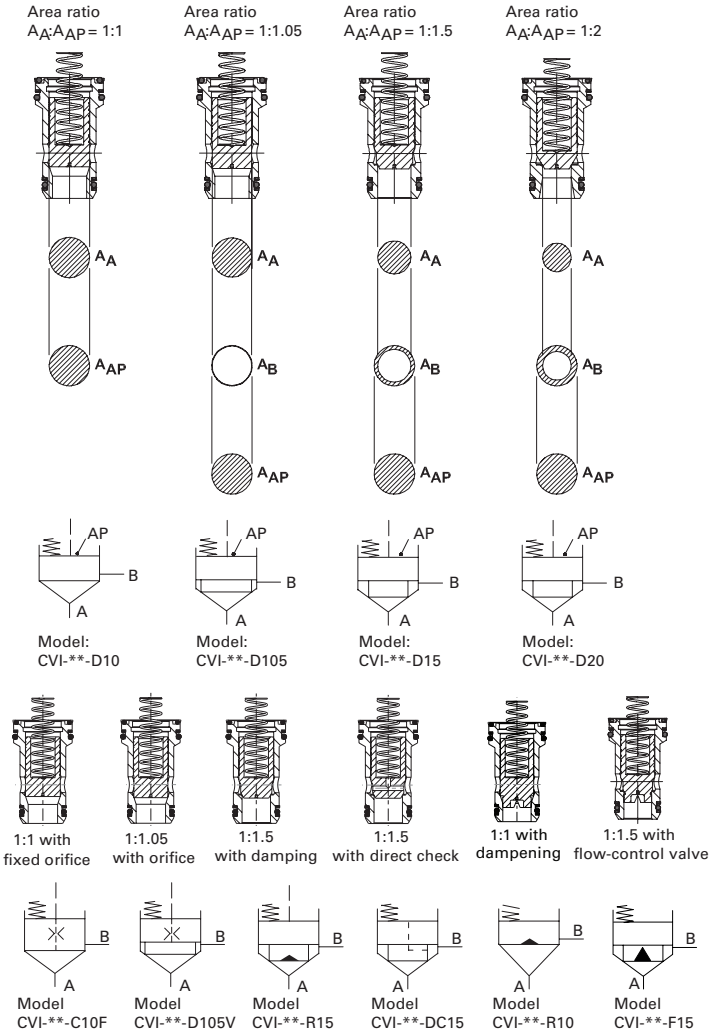

Figure 5

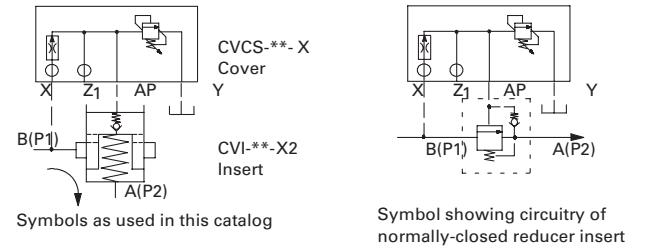

Figure 6

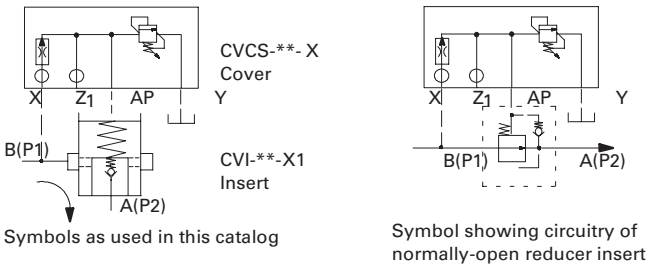

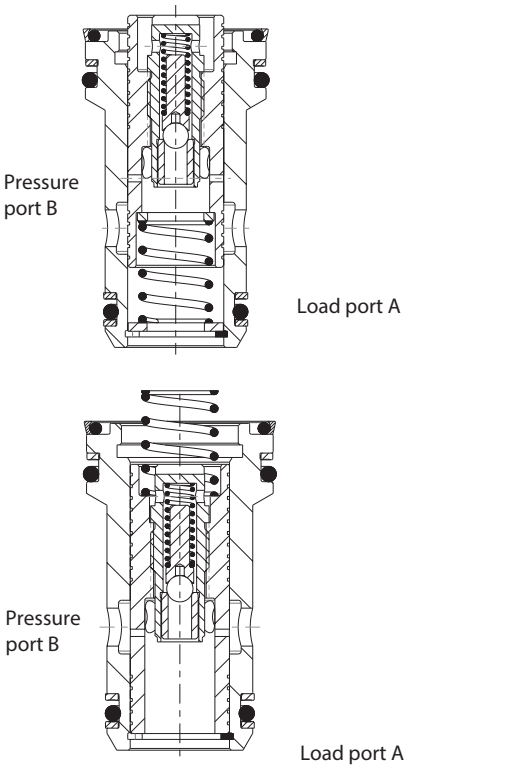

Figure 7

Applications, Ratings and Characteristics

Applications

Cartridge valves are generally used in medium to high pressure hydraulic systems, where flows may be greater than 150 L/min (40 USgpm), to provide power transmission and motion control in a wide variety of applications.

- Presses
- Plastics molding machines
- Die casting machines
- Shears and balers
- Machine tools and metal forming machinery
- Steel mill machinery and other primary metal processing equipment
- Mobile vehicles
- Marine

Response Time

Response time is generally faster than that of large spool type valves which have to clear their overlap before flow starts. With cartridge valves, flow starts as soon as the poppet starts to lift off the seat in the cartridge sleeve. A typical DG4V-3 solenoid operated pilot valve starts to pass pilot flow about 10 ms after it is energized. Full opening time of the cartridge valve depends on the operating pressure and the control orifice size used. Sizing of control orifices is key to tuning the relative response of each cartridge unit. A guide to orifice sizing is on page 117.

Flow Ratings

See chart below. Nominal flow rate at 5 bar (72 psi) pressure drop for insert types:

C10F, D10, D10V for sizes 06-10 (NG16-40)
D10 for sizes 11 and 12 (NG50 & 63)

▲ Nominal size relates to drilled hole (port size) in manifold that connects one cartridge to another.

■ Operational pressures above 350 bar require a pilot valve with the same or higher operating pressure as that of main stage.

Nominal Size ▲ ISO 7368 (DIN 24342)	Flow		Maximum Operating Pressure ■
	L/min	USgpm	
06 (NG16) (approx. 5/8")	333	88	420 bar (6090 psi)
08 (NG25) (approx. 1")	730	193	420 bar (6090 psi)
09 (NG32) (approx. 1 1/4")	1540	407	420 bar (6090 psi)
10 (NG40) (approx. 1 9/16")	2235	590	420 bar (6090 psi)
11 (NG50) (approx. 2")	2350	620	**350 bar (5000 psi)**
12 (NG63) (approx. 2 1/2")	3650	965	**350 bar (5000 psi)**

Temperature Limits

Ambient min. . . . –20°C (–4°F)
Ambient max. . . +70°C (+158°F)

Fluid temperatures:

	Petroleum oil	Water-containing
Min.	–20°C (–4°F)	+10°C (+50°F)
Max.	+80°C (+176°F)	+55°C (+131°F)

Viscosity

The extreme viscosity range is from 500 to 5 cSt (2270 to 42 SUS) but the recommended running range is from 54 to 13 cSt (245 to 70 SUS).

Fluids and Seals

Sizes 16 to 63

All standard seals are NBR (Buna-N). Water glycol (HFC), water-in-oil emulsion fluids (HFB) and petroleum oil may be used with these seals.The use of synthetic fire-resistant fluids requires a valve with special FKM selas. Use 'N' for NBR and 'V' / 'F3' for FKM seals in the model code as per product model code definition.

Cartridges may be used up to 70 bar (1000 psi) with high water base HFA (95/5) fluids. For higher pressures, consult your Danfoss representative. Contact your fluid supplier for seal recommendations.

HYDRAULIC FLUIDS, OPERATING TEMPERATURES AND RECOMMENDED SEAL MATERIAL

	HFB (Invert Emulsion)			NBR
	HFC (Water Glycol)			NBR

NOTE: Fluid viscocity at operating temperatures shall meet the viscocity recommendation of valves

Orifices

Throughout this catalog, graphical symbols are used to describe the function of the cartridge cover and inserts. By changing orifice sizes or adding or deleting them, a cartridge can be fine tuned to achieve desired machine operation. Figure 8 shows a sample graphical symbol with orifices described. Standard orifice sizes and optional orifice kits are shown on pages 115 and 116.

>< Standard (factory-fitted) orifice

◯ Tapped port for installation of optional orifice

⊗ Plugged port

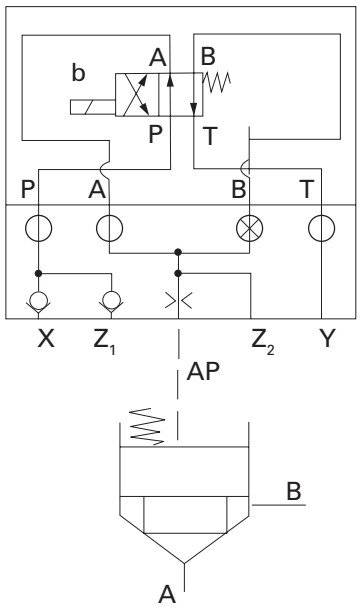

Figure 8

Standard Threads for Covers

Covers in new version are universal design and are with metric pilot interface and orifices. Blanking plugs are with SAE threads.

For versions: HFV, ZD, ZDA
Covers: covers type CVCS-**-*1(or *2) have UNC/UNF threads for pilot valve mounting bolts and orifice/closure plugs with SAE gauge ports if applicable.

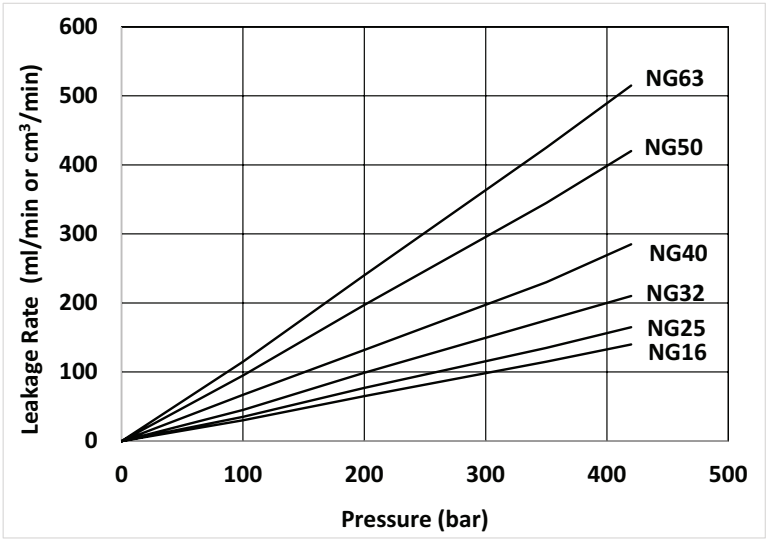

Leakage

Excepting pressure reducing and unloader cartridge inserts, which have spool type construction, inserts are designed with a positive-seating poppet mechanism. Therefore, there is virtually no leakage between ports A and B when the poppet is held in the closed position (Figure 2, page 12). However, leakage can pass through the diametral clearance between area AP and port B.

Leakage should be considered when designing circuits; see graph for maximum leakages. Proper orientation of the cartridge and pilots can yield very low internal leakage in systems.

Maximum Internal Leakages

Fluid viscosity 36 cSt (168 SUS)

Filtration and Viscosity Requirements

Essential information on the correct methods for treating hydraulic fluid is included in the Danfoss publication 03-401-2010 "Danfoss Guide to Systemic Contamination Control", available from your local Danfoss distributor or by contacting Danfoss. Recommendations on filtration and the selection of products to control fluid condition are included in Danfoss publication 03-401-2010.

Recommended cleanliness levels using petroleum oil under common conditions are based on the highest fluid pressure levels in the system. In referencing the table below, the shaded areas highlight the recommended cleanliness level for cartridge valves and proportional throttles. Fluids other than petroleum, severe service cycles or temperature extremes are cause for adjustment of these cleanliness codes. See Danfoss publication 03-401-2010 for exact details.

Insert Assembly Guidance:

In case of insert sizes 16, 25, 32 and 40, one of the 'Insert Assembly Guide Holes' as highlighted in adjacent picture, should be aligned with Port 'B' to optimize the performance.

Insert Assembly Guide Holes Nos. 3, positioned at 120° from one-another

Check, Directional and Flow Restrictor
Functions Sizes 16 to 63

General Information

Cartridge valves for directional and check functions are essentially hydraulically piloted check valves. Control options include single or multiple pilot arrangements, flow restrictors, and solenoid controlled, pilot operated directional control. Grouping cartridge assemblies (selected individually according to flow requirements) for control by one or more common pilot valves can provide directional, check and/or flow restrictor functions for normal flow rates up to 3650 L/min (965 USgpm) per cartridge. Typical single cartridge arrangements are symbolized on the following pages, and your Danfoss representative can illustrate various grouped arrangements. Basic poppets are illustrated. Others provide flow restrictions between ports A and B and internal pilot orificing between port A and spring chamber AP. Poppets can be combined with different springs to provide three different cracking pressures. Standard combinations are shown in the inserts model code on page 26.

Pressure Ratings

Maximum pressure allowable at ports A and B is 420 bar (6090 psi) for all cartridges. Minimum pressure is 0,3 to 5 bar (4.4 to 72 psi), dependent on the poppet/spring combination. See inserts model code on page 26. The maximum pressure limit at pilot ports X, Z1, Z2 and AP and pilot valve interface ports P, T, A and B is generally 420 bar (6090 psi), dependent on the limit of any associated pilot valve or module.

Pilot port Y maximum pressure limit is also 420 bar (6090 psi).

However, port Y is normally used as the pilot drain port, when it should be connected directly to the reservoir. In many functions any pressure at port Y is additive to the set opening/cracking pressure of the cartridge.

Remote Pilot Operated Functions

Remote piloted arrangements (pilot not integrally mounted on cartridge cover) require the application of pilot flows and pressures appropriate to the application and within the limits of any associated pilot valves and modules, whichever have the lower limits. See pilot operated check valve information, page 20. Pilot Control Modules Details of CVG***-3 pilot control modules are shown on pages 111-114.

Solenoid Operated, Hydraulically Piloted Arrangements

For full technical data of pilot valves see appropriate Danfoss catalog:

Nominal Size ISO 7368 (DIN 24342)	Nominal flow at Δ p = 1 bar L/min	USgpm	Nominal flow at Δ p = 5 bar L/min	USgpm

Check Valve Functions

Basic Check Valve: Sizes 16 to 63

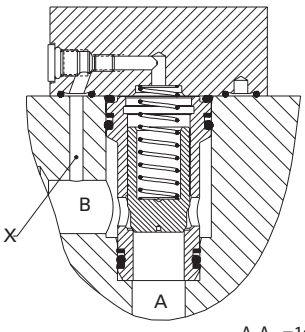

The standard directional cover (model code letter N), contains a pilot pressure passage with an orifice to control the poppet's opening and closing rate. When used with insert model D15 (1:1.5 area ratio poppet), or model D20 (1:2 area ratio poppet), the combined cover and insert, Figure 9, becomes a check valve. Port X in the cover is connected to port B in the insert. This allows free flow from insert port A to port B while blocking flow from B to A.

CVCS-**- N Cover

CVI-**-D15 , or CVI-**-D20 Insert

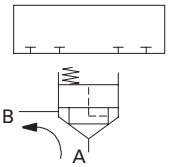

Figure 9

Basic poppet $A_A A_{AP}$=1:1.5 or $A_A A_{AP}$=1:2

Direct Acting Check: Sizes 16 to 63

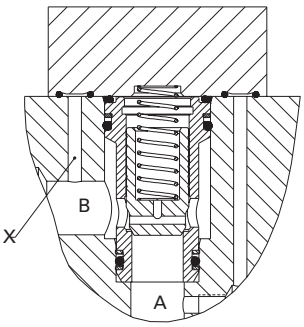

The type DC15 insert is used with the type B cover to provide a direct check function, Figure 10. The free flow direction is A to B. Flow in the opposite direction (B to A) is prevented by connecting port B to the full poppet area A_{AP}, via drilled holes on the poppet, whereby any pressure at port B assists the spring in holding the poppet hard on to its seat.

CVCS-**- B Cover

CVI-**-DC15 Insert

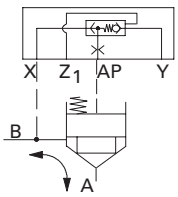

Figure 10

Basic poppet $A_A A_{AP}$=1:1.5

Pilot Operated Check Valve (Pilot Open): Sizes 16 to 63

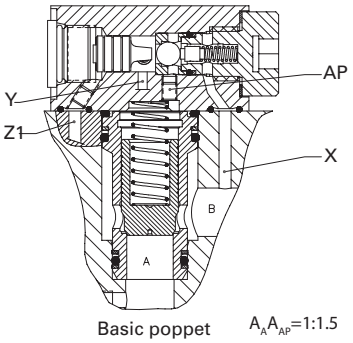

A model PC cover can be combined with a model D15 insert to form a pilot operated check valve (Figure 11). Pilot pressure at Z1 vents spring chamber AP to Y, permitting flow from B to A. Flow from A to B is independent of pilot pressure. With port B connected to the system load, pilot pressure at Z1 must be at least 30% of load pressure, the latter including any intensification that may occur such as when controlling double-acting cylinders. Port Y is normally connected to a drain line.

CVCS-**- PC Cover

CVI-**-D15 Insert

Figure 11

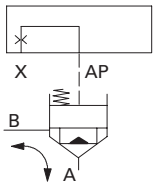

Basic poppet $A_A A_{AP}$=1:1.5

Directional Valve Functions

2-Way, 2-Position Function: Sizes 16 to 63

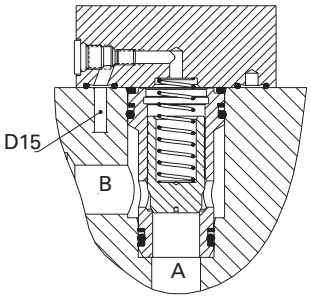

Using a model N cover with a D15 insert, Figure 12, can provide directional control of flow from insert port A to B or from B to A. Pressurizing port X from a remote source will block flow from insert port A and B. With X connected to B, system flow is from A to B. Flow will be from B to A if X is connected to tank or A.

CVCS-**- N Cover

CVI-**-R15/R20 Insert

Figure 12

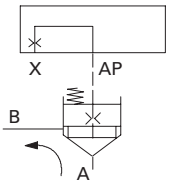

Basic poppet

Area ratio
$A_A:A_{AP}$=1:1.5

2-Way, 2-Position Function (With Internal Pilot): Sizes 16 to 63

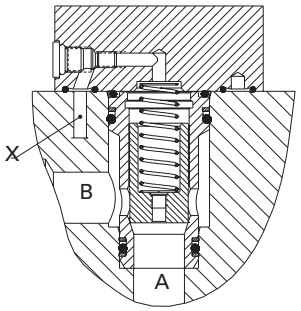

A model N cover is used with a D105 insert (1:1.05 area ratio) which can be supplied with an orifice in the poppet. See Figure 13. This configuration is used to open A to B or block A to B. D105 poppets cannot be used for flow from B to A. The orifice avoids the need to machine a connecting hole in the manifold to port A. To obtain a D105 insert with an orifice in the poppet (i.e. D105V), the orifice size must be specified at the end of the insert model number.

CVCS-**- N Cover

CVI-**-D105V Insert

Figure 13

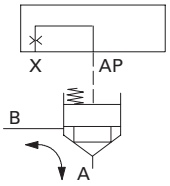

Basic poppet

Area ratio
$A_A:A_{AP}$=1:1.05

Damping Function: Sizes 16 to 63

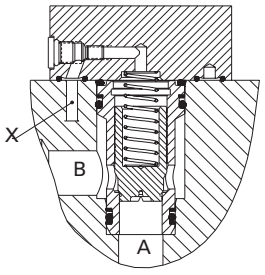

Damping can be achieved with a model R15 insert (area ratio 1:1.5) and R20 (area ratio 1:2), see Figure 14. The poppet has a skirt with a damping notch which helps smooth shifting (reduces gain) of the poppet. R15/R20 inserts may be used with any check or directional function where a D15/D20 insert is ordinarily used.

$A_A:A_{AP}$=1:2

Pilot Shuttle Control: Sizes 16 to 63

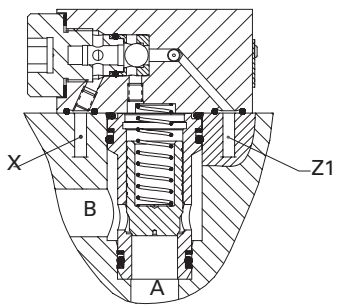

The shuttle function is obtained with a model W cover and D15 insert (Figure 15). The shuttle directs the higher of the pressures at the X and Z1 ports to the spring area (AP) of the insert poppet to close it. The Z2 port can be used as a convenience to operate another cartridge simultaneously.

CVCS-**- W Cover

CVI-**-D15 Insert

Figure 15

Basic poppet

Area ratio
$A_A:A_{AP}$=1:1.5

Sizes 16 to 63

Covers are available with mounting interfaces for pilot valves. These pilots are typically the DG4V-3 solenoid operated directional valve that mounts to the ISO 4401, size 03 (ANSI/ B93.7M-D03) interface. Manually operated DG17V-3, pilot operated DG3V-3, or air operated DG18V-3 pilots are also applicable. The Vickers by Danfoss soft shift pilot valves DG4V-3-**-2/3-**-60 can also be used to achieve smooth opening and closing.

Single or dual solenoid pilots are applicable (Figure 16), depending on circuit requirements. The spool center condition of the solenoid pilots also depends on the circuit function desired. Ports Z1 and Z2 are for remote control of additional cartridges. That is, for D3 covers, Z1 is connected to pilot port A. The X port is the pilot pressure port. The Y port should always go directly to the reservoir. The insert used can be either the model D15 (1:1.5 area ratio poppet), or model D20 (1:2 area ratio poppet).

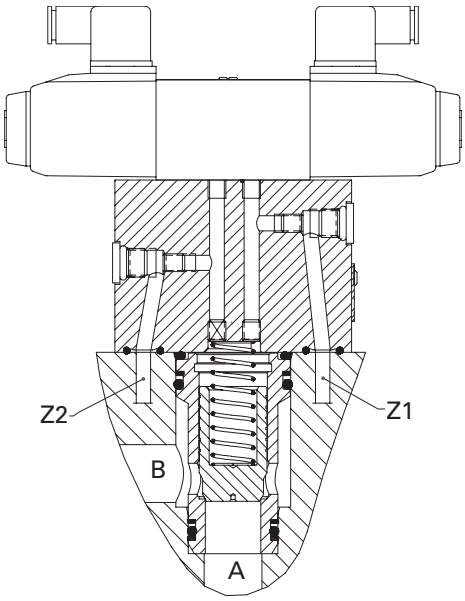

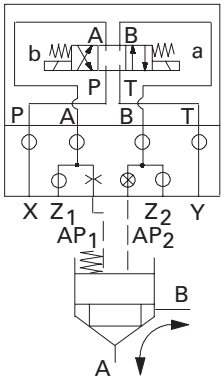

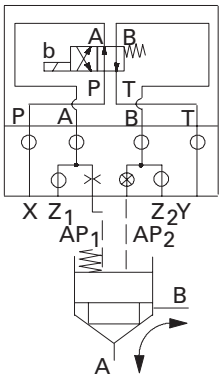

Figure 16

Dual Solenoid Control: Sizes 16 to 63
3-position, spring centered pilot valve

Single Solenoid Control: Sizes 16 to 63
2-position, spring offset pilot valve

Note that the circuitry (i.e. flow path and orifice locations) of these 16 to 40 sizes is different from that of sizes 50 and 63 shown on the next page.

Operational pressures above 350 bar require a pilot valve with the same or higher operating pressure as that of main stage.

Pilot Operated Directional Valves with Shuttle Function

General Information

The shuttle function in combination with a solenoid operated pilot valve is available in cartridge sizes 16 through 63. In each cartridge size, the pilot valve is the DG4V-3 that mounts to the ISO 4401, size 03 (ANSI/B93.7M-D03) interface. There are two functional cover types, W13 and W33, that are applied with a model DG4V-3 pilot valve. The insert used can be either the model D15 (1:1.5 area ratio poppet), or model D20 (1:2 area ratio poppet).

Shuttle Type 1 (W13 Cover): Sizes 16 to 63

With the solenoid de-energized, Figure 17, the cartridge is shut by the higher of the pressures at X or Z_1. Pilot port Z_2 can be used to pilot a second cartridge simultaneously.

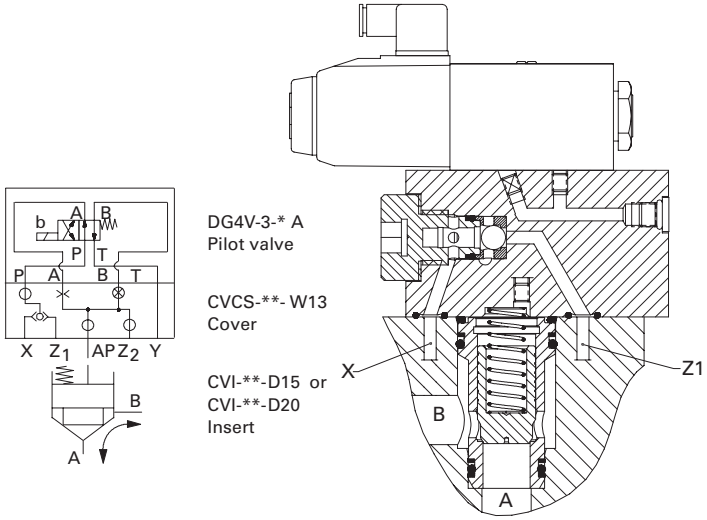

Figure 17

Shuttle Type 3 (W33 Cover): Sizes 16 to 63

The function of the W33 cover, Figure 18, is to provide a non-reverse-flow check, thereby eliminating the need for a separate back flow check. Flow is either blocked or allowed from port B to port A. Flow from port A to port B is always blocked. The application would have pump flow going into port B, port A connected to the actuator and control port X connected to port A.

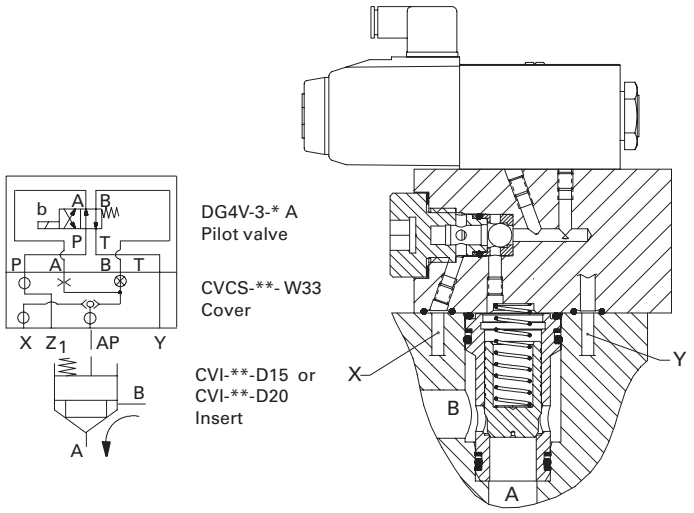

Figure 18

Dual Check (DC3 Cover): Sizes 16 to 63

The DC3 cover, Figure 19, provides parallel check functions in pilot control ports X and Z1. The higher of these two pressures is then available at pilot port P to close the insert via the size 03 solenoid operated valve. A second cartridge can be operated simultaneously from pilot port Z2.

The DC3 cover is similar to the type W13 cover but, whereas there is an open transient condition in the shuttle function (type W13), the DC3 design uses two check valves to ensure that no transient loss of pressure in port P can occur during pilot pressure change-over between ports X and Z1. This feature is of benefit in any application where there must be absolutely no risk of the cartridge even momentarily opening during pilot pressure changeover.

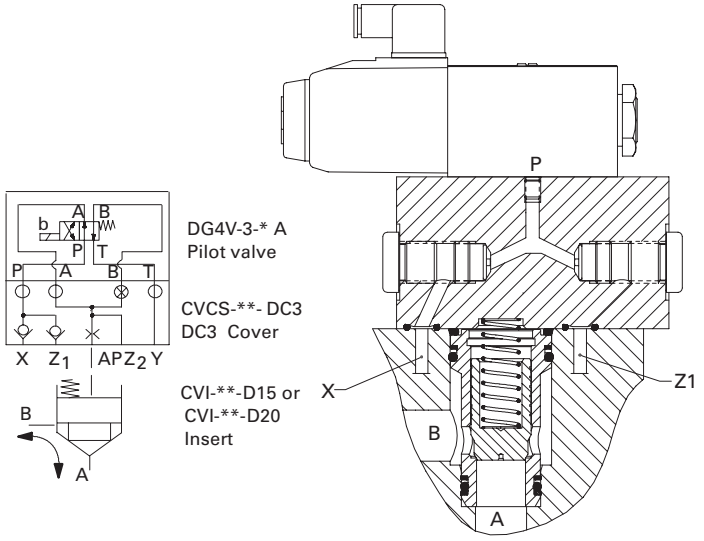

Figure 19

Stroke Limiter Control Functions

General Information

Flow control is by means of a standard cover with a stroke adjuster which limits the stroke of any of the inserts and thereby limits the flow.

Size 16 to 63

The R10 insert (1:1), R15 insert (1:1.5), R20 insert (1:2) has smaller skirt and used as dampening function as well as for fine flow metering (reduced flow gain) during the notch engangement.

The F15 insert (1:1.5) & F20 insert (1:2) are the flow control functions with longer skirt and longer notch, hence more notch engagement enabling flow metering over larger stroke.

Adjustable Stroke Limiter and Directional Functions: Sizes 16 to 63

The adjustable limiting of the insert poppet opening restricts flow in both directions (A to B and B to A). Control is from pilot port X. See Figure 20.

Sizes 16 to 63

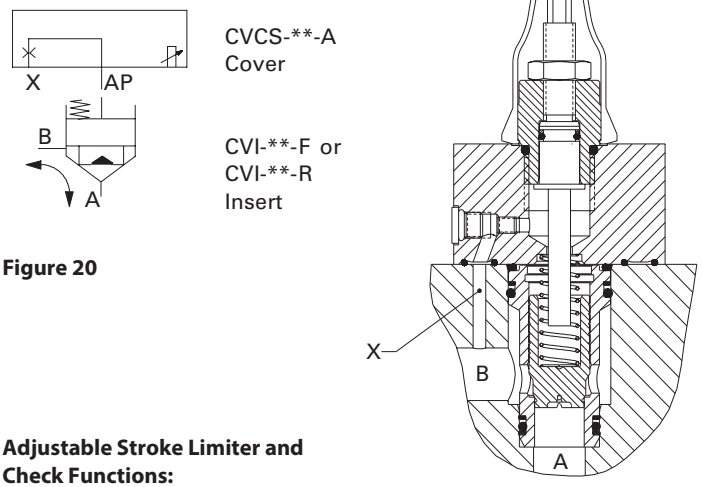

Figure 20

Adjustable Stroke Limiter and Check Functions: Sizes 16 to 63

The adjustable poppet lift limiter restricts flow from A to B. The check function prevents flow from B to A. The X pilot port of the cover is connected to the B port of the insert. See Figure 21.

Sizes 16 to 63

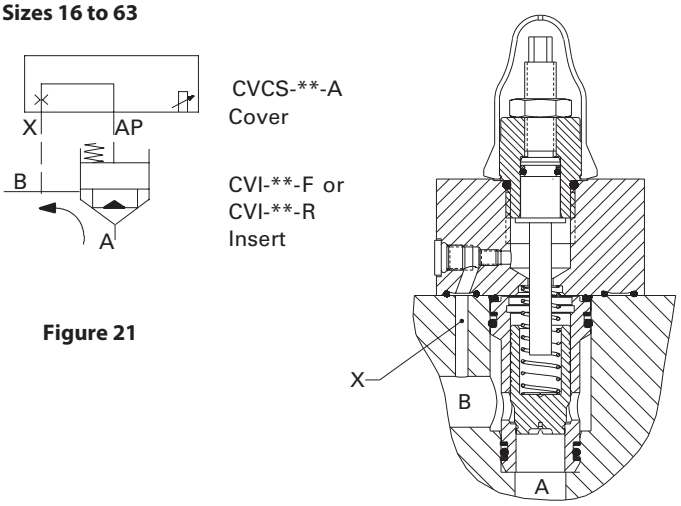

Figure 21

Adjustable Stroke Limiter and Pilot (Directional) Function: Sizes 16 to 63

Stroke limiters are available with an ISO 4401, size 03 (ANSI/B93.7M-D03) interface for mounting a single-solenoid controlled DG4V-3 pilot valve. These type A3 covers are supplied configured for a "normally open" function, i.e. the insert poppet is vented when the solenoid of the pilot valve is de-energized (with pilot pressure applied to port X).

The opposite, "normally closed" (NC) function, can be obtained by interchanging the orifice and plug in ports AP1/AP2. With this arrangement, the insert poppet is "normally closed" (NC) and is open when the solenoid of the pilot valve is energized (with pilot pressure applied to port X).

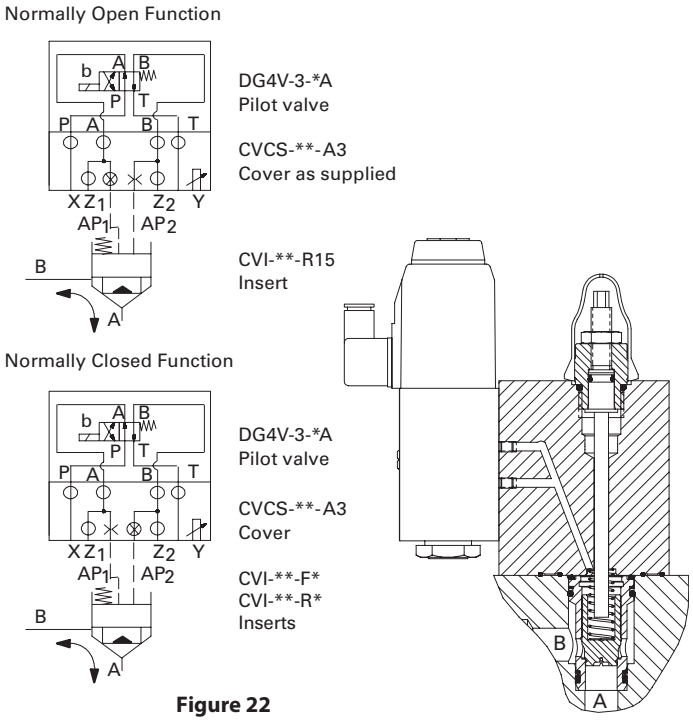

Figure 22

Model Codes - Check, Directional and Flow Restrictor Functions - Sizes 16 to 63

CVCS Covers

Vickers by Danfoss type "CVCS" cartridge covers featured in this catalog conform to installation requirements of ISO 7368 and DIN 24342. This includes port usage changes to the D3, PC, W and

Metric Models

Metric bolt tappings and orifice threads; SAE plugs.

W13 functions from prior published information for cover types

"CVC." For availability of covers by size and function see page 4. All features must be specified when ordering; those in

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVCS-**-***-*-*-30-*****

CVCS	**	***	*	*	30	(NC)	*****
1	2	3	4	5	6	7	8

1 Model

CVCS - Cartridge valve cover to ISO 7368

2 Nominal size to ISO 7368 (DIN 24342)

16 - 06 (NG16)
25 - 08 (NG25)
32 - 09 (NG32)
40 - 10 (NG40)
50 - 11 (NG50)
63 - 12 (NG63)

3 Function

A - Stroke adjuster (flow restrictor)

A3 - Stroke adjuster with mounting face for size 03 pilot valve

B - Blanking cover

D3 - Standard directional with mounting face for size 03 pilot valve

DC3 - Two check valves with mounting face for size 03 pilot valve

N - Basic

PC - Pilot operated check

W - Pilot shuttle (ports X and Z_1)

W13 - As type W with mounting face for size 03 pilot valve

W33 - Pilot shuttle (ports X and B) with mounting face for size 03 pilot valve

4 Adjuster mechanism (for A, A3 functions only)

W - wrench adjustment with hex lock nut (for all sizes)

K - micrometer adjuster with key lock (for NG-16 to 40 sizes only)

M - micrometer adjuster without key lock (for NG-16 to NG-40 sizes only)

5 Seal Material

N - Nitrile Seal Material
V - Viton (FKM) Seal Material
See "Fluids and Seals" on page 15.

6 Design number 30 series

7 Normal function (for A, A3 functions only)

NC - Normally closed
Blank - Normally open

See page 115 for sizes of factory-fitted standard orifices. Other orifice sizes and locations can be fitted by special arrangement with your Danfoss representative. Non-standard orifice requirements should be defined as follows:

8 Pilot control orifice location and size

See table below for pilot control orifice locations, as per selected 'Function'. The letter 'S' in brackets indicates default factory-fitted 'standard' orifice associated with that location. The letter 'S' should be included in the model code at locations where standard orifice is required. Letter 'Z' in brackets indicates that no orifice plug is fitted, whereas letter 'A' indicates blocked port. Letter 'Z' can be omitted if these are at the end of the model code. To specify non-standard orifice sizes, refer table on page 116.

Function	Location 1	Location 2	Location 3	Location 4	Location 5
A	X(S)	-	-	-	-
A3 - NC	AP1(S)	AP2(A)	P(Z)	A(Z)	B(Z)
A3	AP1(A)	AP2(S)	P(Z)	A(Z)	B(Z)
B	-	-	-	-	-
D3	AP1(S)	AP2(A)	A(Z)	B(Z)	Z1(Z)
DC3	AP(S)	P(Z)	A(Z)	B (Z)	T(Z)
N	X(S)	-	-	-	-
PC	AP(S)	Z1(Z)	-	-	-
W	AP(S)	X(Z)	Z1(Z)	Z2(Z)	-
W13	AP(Z)	P(Z)	A(S)	B(A)	Z2(Z)
W33	AP(Z)	X(Z)	P(Z)	A(S)	B(A)

Letter in brackets to be mentioned in the model code at appropriate orifice location.

Refer pages 6 and 7 for pictorial representation of orifice locations.

Pressure Relief and Venting Functions

General Information

Cartridge relief valve covers feature manual pressure setting adjustment with a choice of adjusters, i.e. micrometer (M), micrometer with key lock (K), or standard square end screw with hex. locknut (W). Additionally, venting, unloading, and remote piloting are possible. Alternative arrangements include integral electrical selection of pressure or venting and of dual pressure settings and venting. Electrically proportional control is also available.

The cartridge insert consists of a sleeve, a seating poppet (area ratio 1:1), and a closing spring (Figure 2, page 12). It is retained in the manifold cavity by a control cover which contains the manually adjustable pilot valve and all piloting connections. An ISO 4401, size 03 (ANSI/B93.7M-D03) mounting interface for pilot control valves or modules is optional. Cartridge valve characteristics can be matched to application requirements by adding suitable orifices in the pilot circuit. Relief valve arrangements described in this catalog can be built into system manifold assemblies with directional flow regulating and pressure reducing functions in cartridge form.

System Relief Valve

ISO 7368, B*-**-2-B specifies an interface strictly for use with main system relief valves. This interface differs from ISO 7368, B*-**-2-A, only in the position of the orientation pin see page 123) which prevents any other valve function from being inadvertently installed where a system relief valve should be used. Vickers by Danfoss introduces system relief valve covers, type CVCS-**-SC(*) in compliance with ISO 7368, B*-**-2-B. This is in addition to existing relief covers type CVCS-**-C(*) which conform to ISO 7368, B*-**-2-A.

Maximum Operating Pressure

Up to 420 bar (6090 psi), dependent on the maximum pressure of any pilot valve or module used.

Pressure Adjustment Range

3 to 125 bar (43 to 1800 psi)
5 to 250 bar (72 to 3600 psi)
8 to 350 bar (116 to 5000 psi)
10 to 420 bar (145 to 6090 psi)

Maximum Recommended Flow Rates

Nominal sizes ISO 7368 (DIN 24342):

06 (NG16).....333 lpm (88 US gpm)

08 (NG25).....820 lpm (216 US gpm)

09 (NG32).....1540 lpm (407 US gpm)

10 (NG40).....2235 lpm (590 US gpm)

Control Data

Manual pressure adjustment is located in the control cover. Adjustment options are shown starting on page 45. A vent connection is provided for optional remote control by suitable pilot pressure or pilot directional control valve(s). These can simulate remotely the integral pilot options shown starting on page 45. For typical pilot flows, see chart below.

Pilot Control Modules

Details of CVG***-3 pilot control modules are shown on pages 111-114.

Pilot Control Flows for Maximum Pressure

Nominal valve size ISO 7368 (DIN 24342)	Flow rate through main valve lpm (USgpm)	Pilot flow in lpm (USgpm) for pressure at the A(P) port of 350 bar (5000 psi)
06 (NG16)	50 (13.2)	1,60 (0.42)
	230 (60.1)	2,00 (0.53)
08 (NG25)	20 (5.3) 1,15 (0.30)	
	200 (52.8)	1,50 (0.4)
	550 (145)	1,70 (0.45)
09 (NG32)	25 (6.6) 1,14 (0.30)	
	200 (52.8)	1,60 (0.42)
	680 (180)	1,75 (0.46)
10 (NG40)	25 (6.6) 1,28 (0.34)	
	400 (105.7)	1,60 (0.42)
	700 (184.9)	2,00 (0.53)

General Information

The pressure relief function is obtained by using a model D10 or C10F (1:1 area ratio) insert poppet and either a model C or C3 cover. Zero leak function to have no leakages from pilot to B line is also available using D10Z & C10FZ (ratio 1:1) spool. The C3 cover includes a mounting pad for a pilot valve with an ISO 4401, size 03 (ANSI/ B93.7M-D03) interface. Single or double solenoid pilot valves are applicable. A model CVGC-3 module is available for use with dual solenoid pilot valves to obtain two pressure settings and a vent (both solenoids de-energized) condition.

For main system relief functions use model type SC, SC3. Electrically controlled proportional pilots provide infinitely variable pressure settings over a wide pressure range, achieved by using either a D3 cover or a remote pilot. In each configuration the Z1 port is used as a vent port or for remote hydraulic control. A suitable remote control is the CGR-02 valve. Port Z1 should be blocked when not required. Port Y is a drain port.

When the insert's B port goes directly to tank the Y port can be connected to it. However, any back pressure in the B port is additive to the pressure setting. If there are pressure surges in the B port, the Y port should be directly drained to the tank through a separate line. All functions are available in sizes 16, 25, 32 and 40.

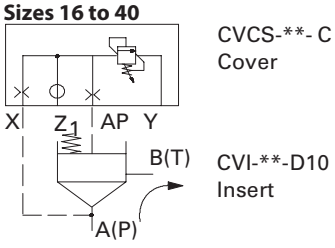

Two insert types are available for pressure relief functions:
Type D10 has no internal orifice and requires pilot connection A to X to be made in the manifold block.

Type D10 insert has good response combined with low shock characteristics and is recommended for general use.

Type C10F has a fixed orifice connecting port A to the pilot relief stage, allowing through-spool piloting for faster response. The higher response characteristics of type C10F can be further enhanced by the addition of the connection A to X within the manifold block. System shock generation is dependent on the usual factors of trapped volume, system pressure and flow rate.

For stable valve operation follow Vickers by Danfoss recommendations for selection of spring for each size of insert. See model code 5, page 41. Factory-fitted orifices in the covers are sized such that a given relief cover can be used with either insert type. Further fine tuning to suit particular system requirements can be achieved by changing orifice sizes. Operation of both types D10 and C10F is similar: System pressure at A(P), Figures 23 and 24, is determined by manual pilot adjustment. Orifices in AP and X ports dampen poppet reaction time, preventing instability. Connecting port Z1 to tank (via an appropriate remote control valve) vents the system pressure at port A(P) to a level equivalent to insert poppet spring load plus override pressure. See curves starting on page 43 for override pressure versus flow rate.

Pressure Relief Function:
Sizes 16 to 40

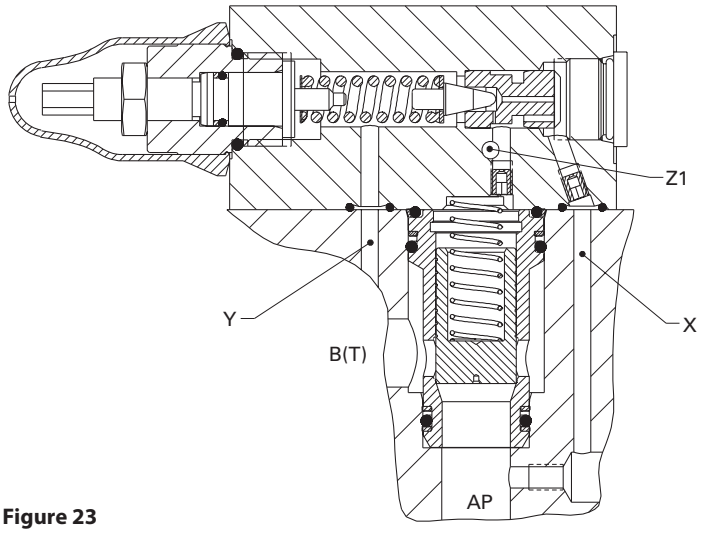

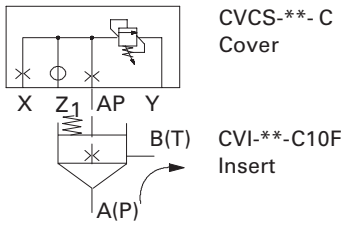

Figure 23

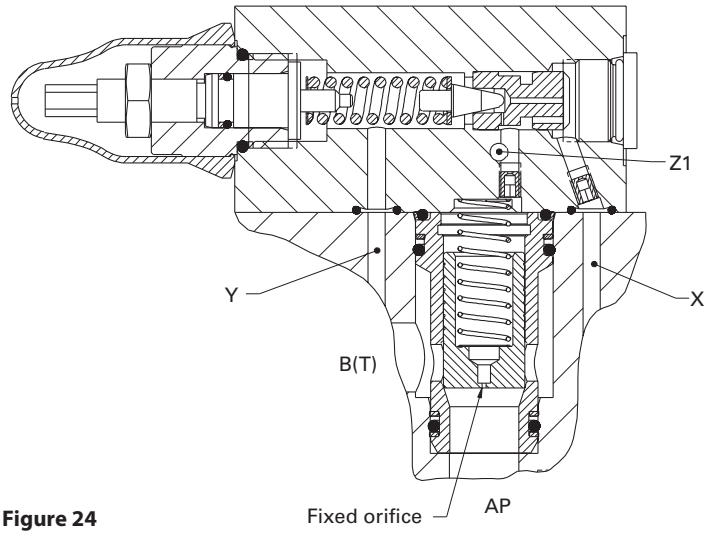

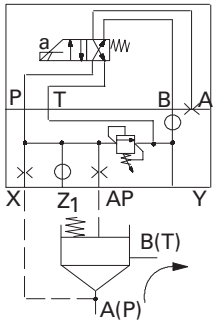

Figure 24

Pressure Relief and Single Solenoid
Pilot Valve: Sizes 16 to 40

When the solenoid is de-energized, Figure 25, the cartridge is vented. When the solenoid is energized, pressure at port A(P) is limited by the setting of the adjuster in the cover. A left hand pilot valve arrangement is shown. A right hand model would allow venting when the solenoid is energized.

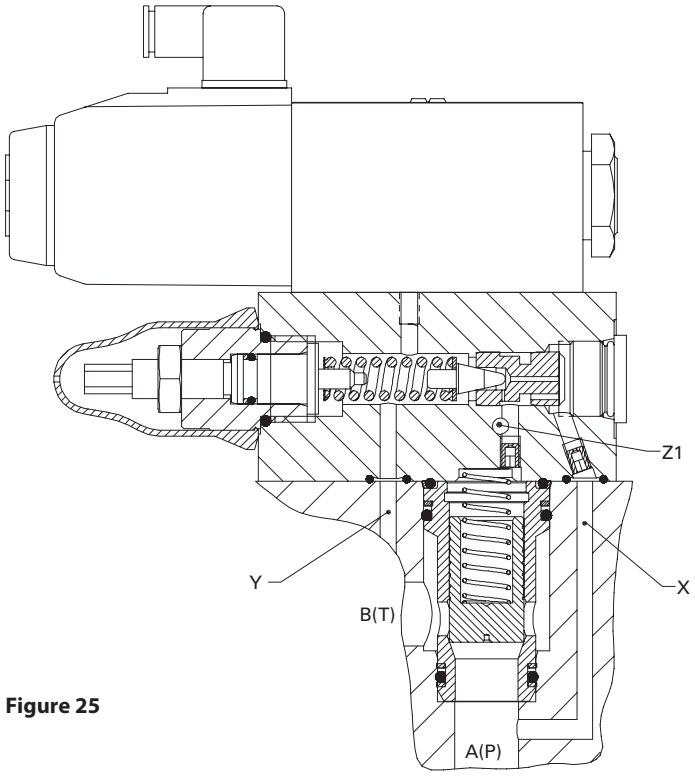

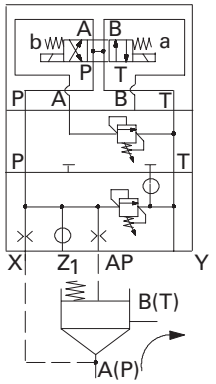

Figure 25

Pressure Relief and Dual Solenoid
Pilot Valve: Sizes 16 to 40

The CVGC-3 module, Figure 26, controls low pressure which occurs when solenoid "a" is energized. Solenoid "b" is energized to obtain the high pressure set by the adjuster on the C3 cover. When both solenoids are de-energized, system pressure is vented to the reservoir. For selection of pilot control module CVGC-3, see pages 111-114.

Pressure Relief (Proportional) and Unloading/Relief Functions

Pressure Relief (Proportional) and Unloading/Relief Functions Remote Relief By Electrohydraulic Proportional Control: Sizes 16 to 40

Maximum pressure is set by the adjuster on the C3 cover. See Figure 27. Pressures below this pressure are remotely electrically adjusted by the proportional pilot valve. Increasing current to the pilot increases the pressure setting.

The pilot valve can be any of those shown in the following table, depending on the working pressure involved. Electronic controllers for the pilots are also shown. For precise KCG-3 configuration according to pressure range and size of cover being used, please refer to page 48.

Pilot Valve	Maximum Adjustable Pressure	Pilot Valve Catalog	Electronic Controller
KCG-3	350 bar (5000 psi)	GB-2162E	EEA-PAM-513-A-33
KBCG-3	350 bar (5000 psi)	BC444156677040en-000101	Internal

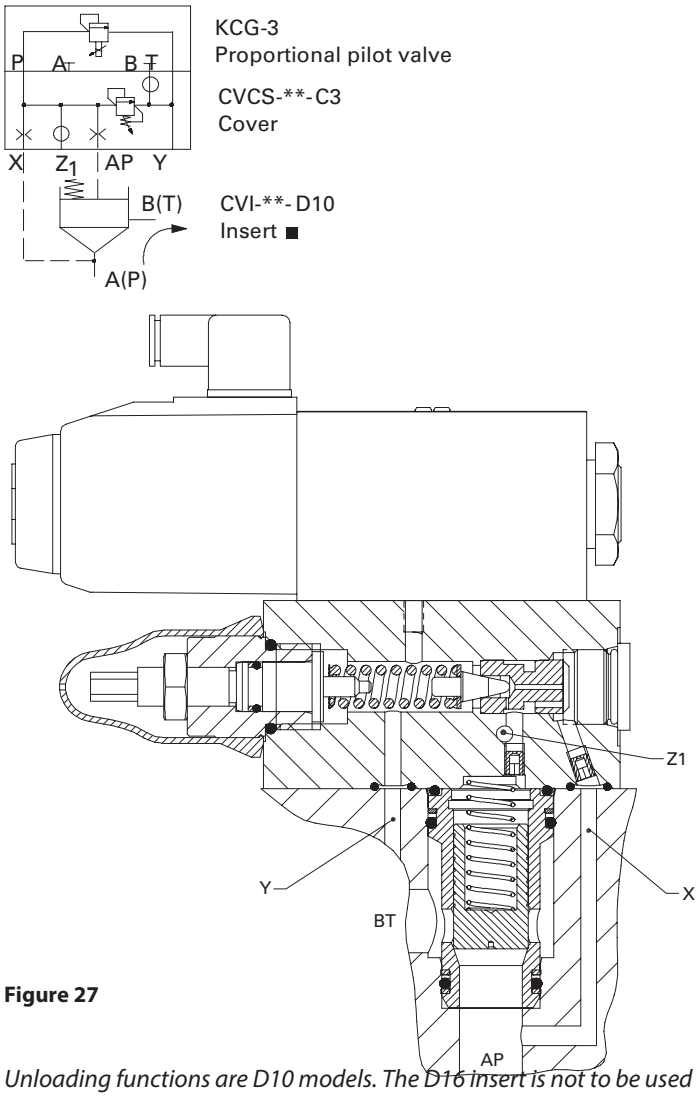

Figure 27

Unloading functions are D10 models. The D16 insert is not to be used as a pressure control such as relief or counterbalancing.

Model Codes - Pressure Relief and Venting Functions

CVCS Covers

Vickers by Danfoss type “CVCS” cartridge covers featured in this catalog conform to installation requirements of ISO 7368 and DIN 24342. This includes function types SC, SC3. All features must be specified when ordering; those in brackets () are optional or apply only to specific models.

Metric Models

Metric bolt tappings and orifice threads; SAE plugs.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVCS-**-*C*-*-*-***-*-30-******

CVCS	**	(S)C(3)	*	***	*	30	****
1	2	3	4	5	6	7	8

1 Model

CVCS - Cartridge valve cover to ISO 7368

2 Nominal size to ISO 7368 (DIN 24342)

16 - 06 (NG16)
25 - 08 (NG25)
32 - 09 (NG32)
40 - 10 (NG40)

3 Function

C - Pressure relief (ISO 7368, B*-**-2-A)
C3 - Pressure relief (ISO 7368, B*-**-2-A) with mounting face for size 03 pilot valve
SC - Pressure relief (ISO 7368, B*-**-2-B)
SC3 - Pressure relief (ISO 7368, B*-**-2-B) with mounting face for size 03 pilot valve

4 Adjuster mechanism

K - micrometer adjuster with key lock (for NG-16 to 40 sizes only)
M - micrometer adjuster without key lock (for NG-16 to NG-40 sizes only)
W - wrench adjustment with hex lock nut (for all sizes)

5 Adjustable pressure range

125 - 3-125 bar (44-1800 psi)
250 - 5-250 bar (73-3600 psi)
350 - 8-350 bar (116-5000 psi)
420 - 10-420 bar (145-6090 psi)
For proportional control ranges, see page 48.

6 Seal Material

N - Nitrile Seal Material
V - Viton (FKM) Seal Material
See "Fluids and Seals" on page 15.

7 Design number 30 series

See page 115 for sizes of factory fitted standard orices. Other orice sizes and locations can be fitted by special arrangement with your Danfoss representative. Non-standard orice requirements should be dened as follows:

8 Pilot control orifice location and size

See table below for pilot control orifice locations, as per selected ‘Function’. The letter 'S' in brackets indicates default factory-fitted ‘standard’ orifice associated with that location. The letter 'S' should be included in the model code at locations where standard orifice is required. Letter 'Z' in brackets indicates that no orifice plug is fitted, whereas letter 'A' indicates blocked port. Letter 'Z' can be omitted if these are at the end of the model code. To specify non-standard orifice sizes, refer table on page 116.

Function	Location 1	Location 2	Location 3	Location 4
(S)C(3)	AP(S)	X(S)	B(Z)	Z1(Z)

Letter in brackets to be mentioned in the model code at appropriate orifice location.

Refer pages 6 and 7 for pictorial representation of orifice locations.

Model Codes - Pressure Relief and Venting Functions

CVI Inserts

All features must be specified when ordering; those in brackets ( ) are optional.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVI-**-*10**-*-*-60**

16 - 06 (NG16)
25 - 08 (NG25)
32 - 09 (NG32)
40 - 10 (NG40)

3 Function

C10F - 1:1 ratio with fixed orifice
D10 - 1:1 ratio
D10Z - 1:1 ratio with zero leak
C10FZ - 1:1 ratio with fixed orifice and zero leak

4 Cracking pressure, bar (psi)

For correct relief function specify spring code according to model size.

Cracking Pressure (bar)			
Size\ Spring	L	M	H
NG16	0.34	1.67	3.33
NG25	0.41	2.07	3.87
NG32	0.38	1.93	3.85
NG40	0.36	1.82	3.64

5 Seal Material

N - Nitrile Seal Material
V - Viton (FKM) Seal Material
See "Fluids and Seals" on page 15.

6 Design number, 60 series

Note: A nameplate is supplied witheach insert for fixing to the cover to identify the insert in use.

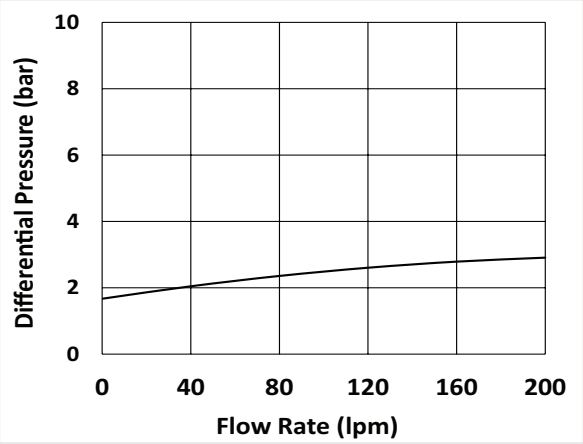

Performance Data - Pressure Relief and Venting Functions

CVCS Covers

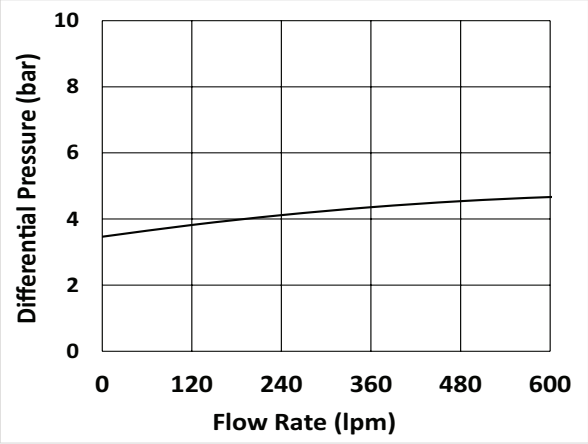

Unless otherwise stated, performances are based on petroleum oil at 36 cSt (168 SUS) and at 50º C (122º F). For pressure drops at other viscosities, see page 118. Thermal stability of proportional cartridge systems primarily depends on the proportional pilot valve.

Pressure Relief Function with Electrohydraulic Proportional Control/ KCG-3 Pilot

For dimensions of CVCS-**-C3 covers, and adjustment types, see page 46.

CVCS-**-C3 Cover with KCG-3 Pilot Valve

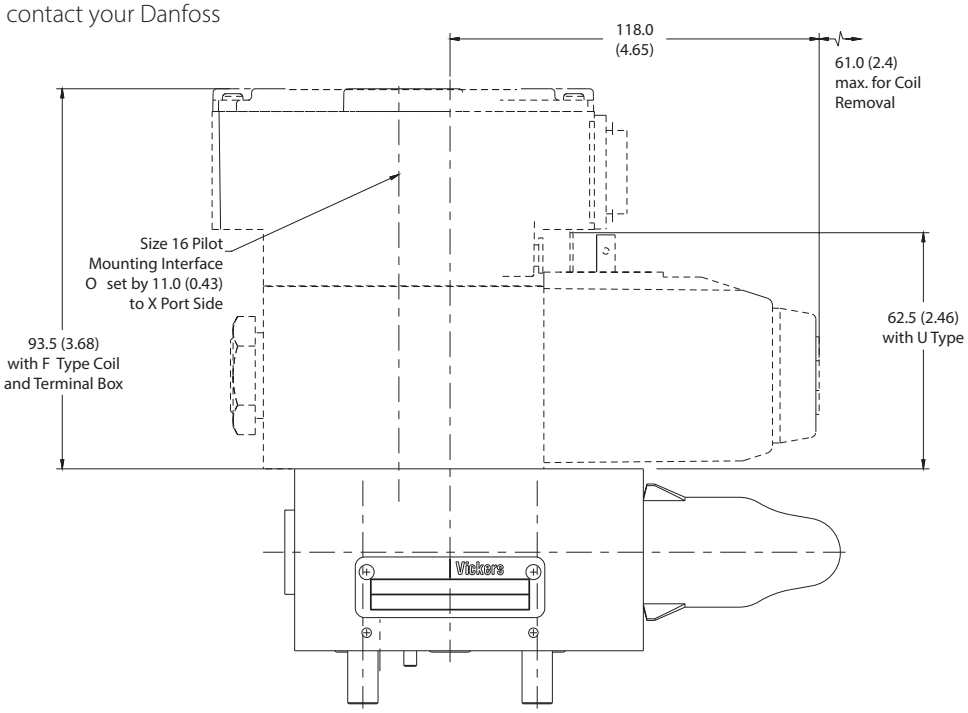

For proportional relief valves using standard CVCS-**-C3 covers, the correct KCG-3 proportional pilot valve should be selected from the following table according to the size and pressure range being used. The sizing and combination of orifices fitted into these pilot valves have been determined by testing to give good response and stable operation across a wide range of average system parameters using standard covers (i.e. with standard sizes of factory fitted orifices – see page 115).

Other orifice combinations can be provided to meet individual requirements of customer installations. Please contact your Danfoss representative.

General Information

In addition to providing the basic relief function (as described in the preceding section, "Valves for Pressure Relief Functions") the unloading relief function provides the means of automatically loading/unloading a fixed delivery pump according to system demands. The high pressure side of the hydraulic system is connected, via port X, to a small piston fitted in front of the poppet of the pilot relief stage in the unloader cover. When system pressure on port A reaches the pressure setting of the pilot stage, the valve, acting as a relief valve, starts to open. The pressure drop created by the pilot flow through the orifices (in the main poppet and the cover) is seen across the ends of the pilot piston, causing the piston to quickly move up and hold the pilot relief poppet off its seat. Full pilot flow at low pressure then creates sufficient pressure to fully lift the main poppet to open the mainstream flow path from A to B.

The valve remains in this condition until the reference pressure at port X drops to approximately 80% of the maximum, when the force of the pilot relief spring pushes the pilot piston back, allowing the pilot poppet to re-seat, bringing the system on-load again. Venting is controlled through port Z1. Design features providing smooth load/unload characteristics, with metering capability for partial unloading, together with stable operation are:

- Poppet is sliding spool type, with metering holes to give progressive opening.
- High gain pilot relief stage poppet.
- 20% differential pilot stage unloader piston.

Maximum Operating Pressure

420 bar (6090 psi)

Pressure Adjustment Range

3 to 125 bar (43 to 1800 psi)
5 to 250 bar (72 to 3600 psi)
8 to 350 bar (116 to 5000 psi)
10 to 420 bar (145 to 6090 psi)

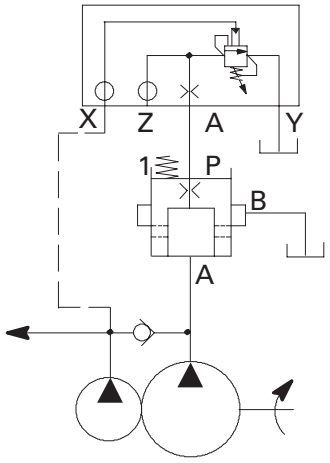

Nominal Flow Rates

At 5 bar (72 psi) pressure drop with valve unloaded.

Nominal sizes ISO 7368 (DIN 24342)

06 (NG16).....190 lpm (50 USgpm)
08 (NG25).....300 lpm (79 USgpm)
09 (NG32).....615 lpm (162 USgpm)
10 (NG40).....915 lpm (242 USgpm)

Typical applications for unloader functions are:

Note: Relief valve for high pressure pump omitted for clarity
Figure 28

2. Accumulator systems, see Figure 29, where one pump section (usually the smaller) is maintained on load against its own high pressure relief valve, and the other section off/onloaded according to system demands.

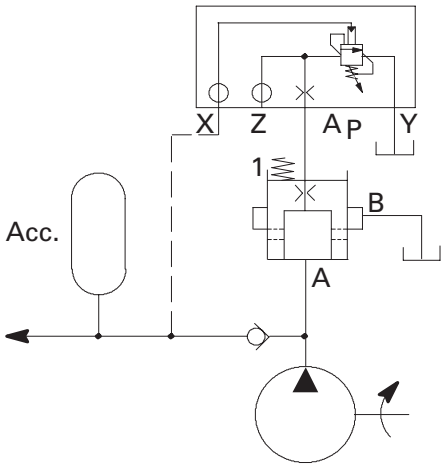

Figure 29

Pressure Relief and Unloading:
Sizes 16 to 40

Pilot connection A to Z1 is needed to ensure the pressure relief function A to B. Pump flow at port A can be unloaded by application of pilot pressure to port X. This pressure must be equal to the pressure setting of the unloader pilot stage to initiate unloading; the system pressurizes again when this pressure drops by approx. 20% or more.

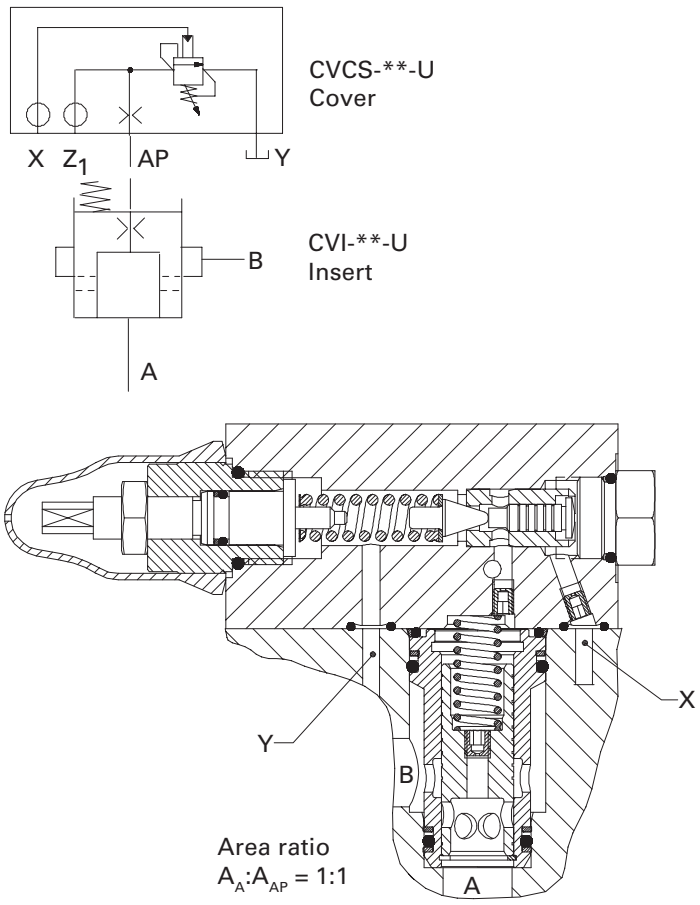

Figure 30

Pressure Relief and Unloading with Electrical Selection of Venting:
Sizes 16 to 40

When it is required to unload the system independently of the system demands, this can be achieved by using the cover types U3 and selecting a suitable size 03 solenoid operated pilot valve. By using Vickers by Danfoss model type DG4V-3-2AL for example, the system is unloaded when the solenoid is de-energized. When the solenoid is energized the unloader function operates (via pilot port X) as described above.

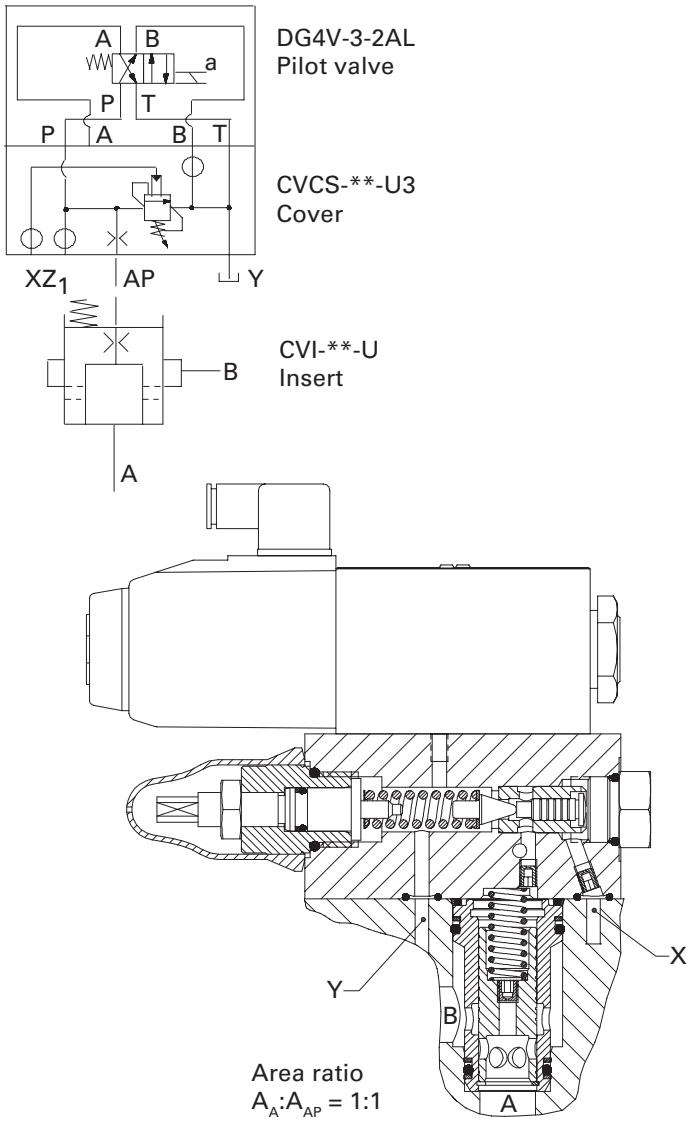

Figure 31

Model Codes - Unloading/Relief Functions

CVCS Covers

Vickers by Danfoss type "CVCS" cartridge covers featured in this catalog conform to installation requirements of ISO 7368 and DIN 24342. All features must be specified when ordering; those in brackets () are optional or apply only to specific models.

Metric Models

Metric bolt tappings and orifice threads; SAE plugs.

Pressure Reducing Functions

General Information

The basic pressure reducing cartridge features manual adjustment of reduced pressure plus a pilot port for optional remote control. Additional options include electrical selection of high and low pressure, and electrohydraulic proportional control of reduced pressure. Reducing valve arrangements described in this catalog can be built into system manifold assemblies with directional, manually adjustable flow restrictor and pressure relief functions in cartridge form. The reducing function is available in sizes 16, 25, 32 and 40.

Ratings

Maximum operating

Pressure .....420 bar (6090 psi)

Rated flow .....(p = 12 bar / 175 psi)

Size 16.....246 lpm (65 USgpm)

Size 25.....486 lpm (128 USgpm)

Size 32.....730 lpm (193 USgpm)

Size 40.....1150 lpm (304 USgpm)

Pressure adjustment ranges:

1,5 to 125 bar (22 to 1800 psi)

3,0 to 250 bar (44 to 3600 psi)

5,0 to 350 bar (72 to 5000 psi)

10 to 420 bar (145 to 6090 psi),

All ports are rated up to 420 bar (6090 psi), depending on limits for relevant ports in any associated pilot valves or modules. Note that any pressure in port Y is additive to the setting(s) of the integral pilot pressure control(s).

Pressure Reducing Functions

Unlike other cartridge valve inserts, the reducer insert contains a spool rather than a poppet. Therefore, no reference is made to an area ratio in relation to reducing valves. The reducing valve is normally closed. It varies flow to provide a constant outlet pressure below that of the inlet pressure. The pressure differential between inlet and outlet must be at least 5 bar (72 psi) for optimum reduced pressure control for low flows.

System pressure at B is communicated through a compensated flow control in the X or X3 cover into area AP. This flow control maintains a constant flow across the cover poppet, independent of the main flow from B(P1) to A(P2), thereby providing pressure stability at all system flow rates. Load pressure transients are relieved through the check valve located in the insert spool and are limited by the pilot pressure control in the cover.

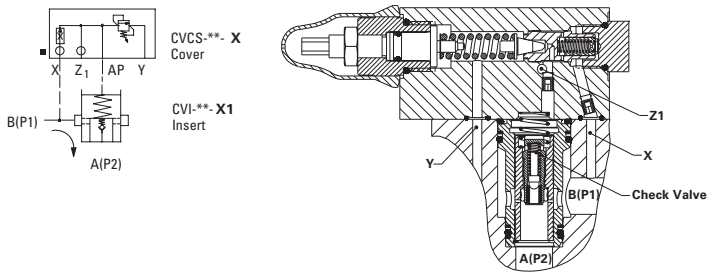

The Z1 port is used for remote control of the reduced pressure. Suitable remote controls are the C-175 and CGR-02. Venting of the Z1 port will cause outlet pressure A(P2) to drop to a minimum pressure related to the spring load in the insert spool. The Z1 port should be blocked when not required. The Y port is used to drain the pilot oil.

Dual reduced pressure functions are available using the model X3 cover and CVGC-3 module. The X3 cover has a mounting pad with an ISO 4401, size 03 (ANSI/B93.7MD03) interface that accepts pilot valve DG4V-3-2AL (two position, spring offset type) or DG4V-3-2N (two-position mechanical detent type). For information on the DG4V-3 valve. Air operated DG18V-3 or DG17V-3 manually operated pilots are also applicable. An electrically modulated proportional pilot is available that can provide infinitely variable reduced pressure settings and a vent condition.

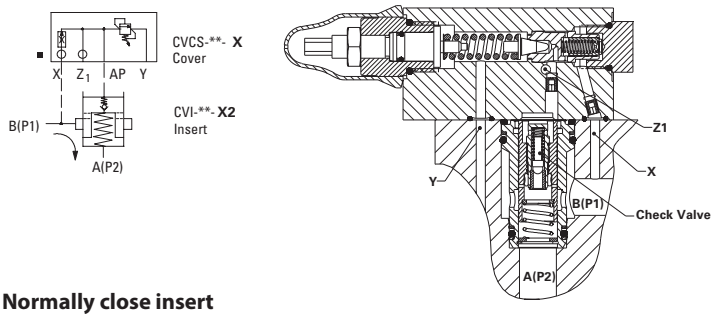

Pressure Reducing with Manual Adjustment and Remote Control: Sizes 16 to 40

Reduced pressure at A(P2) is controlled by the manual adjuster in the cover. Pilot port Z1 is used for remote control. See Figure 32.

■ *This X port orifice/plug tapping not on size 16.*

Normally open insert

Normally close insert

Figure 32

Dual Level Reduced Pressure by Remote Electrical Selection: Sizes 16 to 40

Alternative arrangements using either the DG4V-3-2AL (two-position, single solenoid, spring-offset) or DG4V-3-2N (double solenoid, two-position detented) pilot valve are shown in Figure 33. Control is at the X3 cover when the DG4V-3-2AL is de-energized or the DG4V-3-2N "b" solenoid is momentarily energized. Control is at the CVGC-3 module, sandwiched between the cover and pilot valve, when the DG4V-3-2AL solenoid "a" is energized or solenoid "a" of the DG4V-3-2N is energized. In each case, the pressure set at the X3 cover should be the higher of the two levels.

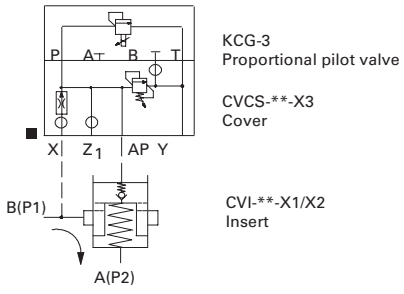

■ This X port orifice/plug tapping not on size 16.

Pressure Reducing Function by Electrohydraulic Proportional Control: Sizes 16 to 40

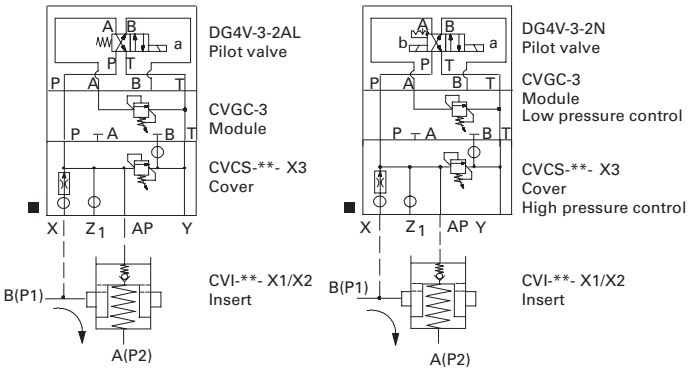

The electrically modulated pilot controls pressure below the maximum manually set level at the X3 cover. Reduced pressure is proportional to the applied current. Increasing current to the pilot increases the reduced pressure at port A(P2). See Figure 34. The pilot valve can be any of those charted below, depending on the working pressure involved. Electronic controllers to be used with the pilots are also shown. For precise KCG-3 configuration according to pressure range and size of cover being used, please refer to page 66.

Pilot Valve	Maximum Reduced Pressure	Pilot Valve Catalog	Electronic Controller
KCG-3	350 bar (5000 psi)	GB-2162E	EEA-PAM-513-A-33
KBCG-3	350 bar (5000 psi)	BC444156677040en-000101	Internal

Model Codes - Pressure Reducing Functions

CVCS Covers

Vickers by Danfoss type “CVCS” cartridge covers featured in this catalog conform to installation requirements of ISO 7368 and DIN 24342. All features must be specified when ordering; those in brackets () are optional or apply only to specific models.

Metric Models

Metric bolt tappings and orifice threads; SAE plugs.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVCS-**-X*-*-***-*-30-****

CVCS	**	X(3)	*	***	*	30	****
1	2	3	4	5	6	7	8

1 Model

CVCS - Cartridge valve cover to ISO 7368

2 Nominal size to ISO 7368 (DIN 24342)

16 - 06 (NG16)
25 - 08 (NG25)
32 - 09 (NG32)
40 - 10 (NG40)

3 Function

X - Pressure reducing
X3 - Pressure reducing with mounting face for size 03 pilot valve mounting face for size 03 pilot valve

4 Adjuster mechanism

K - micrometer adjuster with key lock
M - micrometer adjuster without key lock
W - wrench adjustment with hex lock nut

5 Adjustable pressure range

125 - 3-125 bar (44-1800 psi)
250 - 5-250 bar (73-3600 psi)
350 - 8-350 bar (116-5000 psi)
420 - 10-420 bar (145-6090 psi)
For proportional control ranges please see page 66

6 Seal Material

N - Nitrile Seal Material
V - Viton (FKM) Seal Material
See "Fluids and Seals" on page 15.

7 Design number 30 series

See page 115 for sizes of factory-fitted standard orifices. Other orifice sizes and locations can be fitted by special arrangement with your Danfoss representative. Non-standard orifice requirements should be defined as follows:

8 Pilot control orifice location and size

See table below for pilot control orifice locations, as per selected ‘Function’. The letter 'S' in brackets indicates default factory-fitted ‘standard’ orifice associated with that location. The letter 'S' should be included in the model code at locations where standard orifice is required. Letter 'Z' in brackets indicates that no orifice plug is fitted, whereas letter 'A' indicates blocked port. Letter 'Z' can be omitted if these are at the end of the model code. To specify non-standard orifice sizes, refer table on page 116.

Function	Location 1	Location 2	Location 3	Location 4
X(3)	AP(S)	X(Z)	B(Z)	Z1(Z)

Letter in brackets to be mentioned in the model code at appropriate orifice location.
Refer pages 6 and 7 for pictorial representation of orifice locations.

Model Codes - Pressure Reducing Functions

CVI Inserts

All features must be specified when ordering; those in brackets ( ) are optional.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVI-**-X-*-60**

Pressure Reducing Function with Electrohydraulic Proportional Control/KCG-3 Pilot

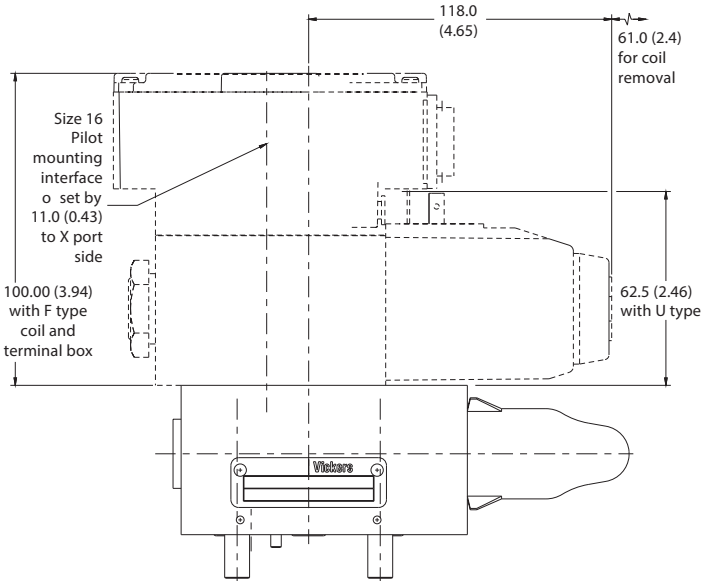

For dimensions of CVCS-**-X3 covers, and adjustment types, see page 64.

CVCS-**-X3 Cover with KCG-3 Pilot Valve

For proportional pressure reducing valves using standard CVCS-**-X3 covers, the correct KCG-3 proportional pilot valve should be selected from the following table according to the size and pressure range being used. The sizing and combination of orifices fitted into these pilot valves have been determined by testing to give good response and stable operation across a wide range of average system parameters using standard covers (i.e. with standard sizes of factory fitted orifices -- see page 115).

Other orifice combinations can be provided to meet individual requirements of customer installations. Please contact your Danfoss representative.

Size	Pressure control range bar (psi)	Cover max. pressure code, see CVCS model code 6 page 59	Pilot valve model code For KCG models add required coil connection and rating (See GB-2162E for full model code details of KCG-3)

Dynamic Functions

General Information

Dynamic cartridge valves have been developed for applications which require fast opening and closing times as well as a means of ensuring that the insert/poppet has seated positively.

Inserts are available:

- With seals on the poppet which eliminate internal leakage, ensuring pressure is maintained in pilot port A.
- Without spool seals for fast response with low hysteresis.

Dynamic valves can be built into any system manifold assemblies which require the features offered by this new range, whether for directional or check control function. The inserts are offered with the three springs L, M and H, and the cover comes with or without a stroke limiter. Dynamic range is available in sizes 16 to 63. The inserts have an area ratio of 1:1.05 as seen by the model code CVI-**-ZD105, where Z means dynamic.

Dynamic Functions

Unlike other cartridge valve inserts, the dynamic insert extends above the manifold to allow access to the pilot port. It is this pilot port which pilots the poppet open or closed giving the dynamic feature. The pilot pressure is applied via the Z2 port on the manifold if there is no pilot valve or via the B port on the size 03 interface.

Piloting can be achieved by directly mounting a size 03 directional valve on the mounting pad with an ISO 4401, size 03 (ANSI/B93.7M-D03) interface which accepts any of the DG4V-3 valves. The Z2 port is used for remote control of the dynamic insert.

The dynamic insert can only be used with the special dynamic cover. The cover can also be offered with a stroke limiter for those applications where it is required to limit the stroke and hence the flow of the relevant insert. Dynamic function is suited for directional or check control functions requiring fast response.

Basic Characteristics

Maximum operating pressure.....420 bar (6090 psi)

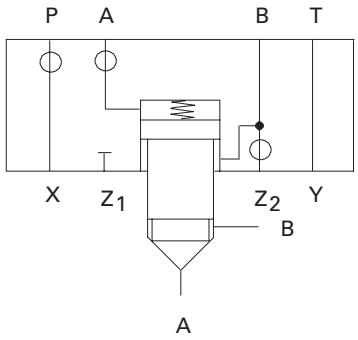

Maximum flow rate (Δp = 5 bar/72 psi):

ISO 7368 (DIN 24342)	A to B	B to A
06 (NG16)	316 lpm (83 US gpm)	298 lpm (79 US gpm)
08 (NG25)	679 lpm (179 US gpm)	634 lpm (167 US gpm)
09 (NG32)	1435 lpm (379 US gpm)	1335 lpm (353 US gpm)
10 (NG40)	2043 lpm (540 US gpm)	1905 lpm (503 US gpm)
11 (NG50)	1800 L/min (476 USgpm)	1560 L/min (412 USgpm)
12 (NG63)	3000 L/min (793 USgpm)	2600 L/min (687 USgpm)

All ports are rated up to 420 bar (6090 psi) depending on limits for relevant ports in any associated pilot valves or modules.

Functional Symbols

Cover CVCS-**-ZDA*-W-*-20
Insert CVI-**-ZD(N)105-*-*-20

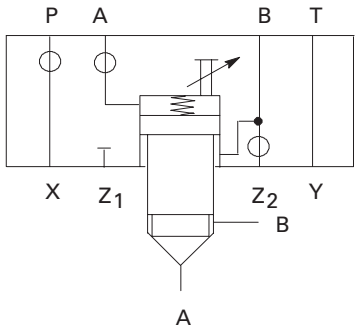

Figure 35

Features and Benefits

- Opening and closing independent of A and B port pressure.
- Positive closing using pilot pressure.
- High degree of control and repeatability.
- Smooth and accurate operation can be achieved (not affected by main flow).
- Fully interchangeable with conventional cartridges.
- Varied circuit application uses: pilot operated check, prefill valve, decompression valve, flow control valve, etc.
- Zero internal pilot leakage option: ZD105.
- Low hysteresis, fast response option: ZDN105.

Maximum Leakage

Seat leakage A to B port when spool is held closed.

Size	Max. leakage at 100 bar (1450 psi) cm^3/min (in^3/min)
16	0.15 (0.009)
25	0.20 (0.012)
32	0.28 (0.017)
40	0.35 (0.021)
50	0,40 (0.024)
63	0,55 (0.033)

With spool seals omitted (ZDN105) leakage between spring, pilot chambers and B port is as follows.

Size	Max. leakage at 350 bar (5000 psi) cm^3/min (in^3/min): AP to BP or BP to AP	BP to B or B to BP
16	650 (40)	30 (1.83)
25	700 (43)	40 (2.44)
32	800 (49)	50 (3.05)
40	1400 (86)	60 (3.64)
50	1700 (104)	80 (4.86)
63	2000 (122)	90 (5.46)

With spool seals fitted (ZD105) there is no leakage between AP and BP, or between BP and B.

Area ratio	A_A	:	A_B	:	A_{BP}	:	A_{AP}
Size 16	1	:	0.05	:	0.40	:	1.45
Sizes 25-63	1	:	0.05	:	0.30	:	1.35

Calculation of Pilot Flow Rate for Given Response Time, t secs:

1. Metric Units

$$\text{Flow rate AP} = \frac{\text{Area } A_{AP}, \text{ mm}^2}{100} \times \frac{\text{Stroke, mm}}{10} \times \frac{60}{t} = \text{cm}^3\text{/min}$$

$$\text{Flow rate BP} = \frac{\text{Area } A_{BP}, \text{ mm}^2}{100} \times \frac{\text{Stroke, mm}}{10} \times \frac{60}{t} = \text{cm}^3\text{/min}$$

2. Inch Units

$$\text{Flow rate AP} = \text{Area } A_{AP}, \text{ in}^2 \times \text{Stroke, in} \times \frac{60}{t} = \text{in}^3\text{/min}$$

$$\text{Flow rate BP} = \text{Area } A_{BP}, \text{ in}^2 \times \text{Stroke, in} \times \frac{60}{t} = \text{in}^3\text{/min}$$

Note:
The required piloting pressures and the actual response time will be influenced by:

1. Spring force (closing force)
2. Pressures acting on main ports A and B (opening forces)
3. Flow forces

Model Codes - Dynamic Functions

CVCS Covers

Vickers by Danfoss type “CVCS” cartridge covers featured in this catalog conform to installation requirements of ISO 7368 and DIN 24342. All features must be specified when ordering; those in brackets () are optional or apply only to specific models.

Metric Models

Metric bolt tappings and orifice threads; UNF plugs.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVCS-**-ZD*3-*-*-20-*****

CVCS	**	ZD(A)3	(W)	*	20	***
1	2	3	4	5	6	7

1 Model

CVCS - Cartridge valve cover to ISO 7368

2 Nominal size to ISO 7368 (DIN 24342)

16 - 06 (NG16)
25 - 08 (NG25)
32 - 09 (NG32)
40 - 10 (NG40)
50 - 11 (NG50)
63 - 12 (NG63)

3 Function

ZD3 - Dynamic with mounting face for size 03 pilot valve

ZDA3 - Dynamic with stroke limiter and mounting face for size 03 pilot valve

4 Adjuster mechanism

For model type ZDA(3) only

W - Wrench adjustment with hex locknut

5 Seal Material

N - Nitrile Seal Material
V - Viton (FKM) Seal Material
See "Fluids and Seals" on page 15.

6 Design number 20 series

See page 115 for sizes of factory-fitted standard orifices. Other orifice sizes and locations can be fitted by special arrangement with your Danfoss representative. Non-standard orifice requirements should be defined as follows:

7 Pilot control orifice location and size

See table below for pilot control orifice locations, as per selected ‘Function’. The letter 'S' in brackets indicates default factory-fitted ‘standard’ orifice associated with that location. The letter 'S' should be included in the model code at locations where standard orifice is required. Letter 'Z' in brackets indicates that no orifice plug is fitted, whereas letter 'A' indicates blocked port. Letter 'Z' can be omitted if these are at the end of the model code. To specify non-standard orifice sizes, refer table on page 116.

Function	Location 1	Location 2	Location 3
ZDA(3)	P(Z)	A(Z)	Z2(Z)

Letter in brackets to be mentioned in the model code at appropriate orifice location.

Refer pages 6 and 7 for pictorial representation of orifice locations.

Model Codes - Dynamic Functions

CVI Inserts

All features must be specified when ordering; those in brackets ( ) are optional.

A hyphen '-' to be used for separating features in model code.
A generic model code would look like: **CVI-**-ZD*105-*-*-20**

CVI	**	ZD(N)105	*	*	20

General Description

Danfoss's Vickers® HFV (Hydraulic Feedback Valvistor®) range of slip-in cartridge valves uses a self-regulating hydraulic design for the control of flow rate by a current-controlled PWM signal.The design achieves servo-type control of the main poppet without using an electrical feedback transducer.

The construction and features of these valves open up a wide range of applications with hydraulic cylinders and motors. Such applications include ie casting, deep drawn presses, injection molding, container handling, shovel loaders, forestry and dump trucks. With the addition of HFV valves to the established ISO 7368 (DIN 24342) cartridge valves, Danfoss has further enhanced an already comprehensive range.

Valvistor Technology

In "Valvistor" designs a main poppet amplifies a small flow through the pilot circuit, comparable to a transistor. Thus the name "Valvistor", derived from "valve" and "transistor". Figures 39 and 40 show the construction of proportional throttles to ISO 7368. In both cases a Vickers type KTG4V-3S proportional valve is used as the pilot control valve. KBTG4V- 3S-EN427 & KBFTG4V-3SEN427 (for both refer catalogue BC448665329169en-000101) can also be used as pilot valves. Hydraulic position feedback is obtained by providing the main poppet with a longitudinal slot (5) in its cylindrical surface. This slot, together with a metering edge inside the sleeve, forms a variable orifice between the inlet of the valve and the volume above the main poppet (3). When the valve is closed and the main poppet is seated, the variable orifice area is almost closed.

Figure 39

Construction for flow direction A to B; poppet in the closed (no flow) condition. (Note: For flow A-B, poppet drilled from A.)

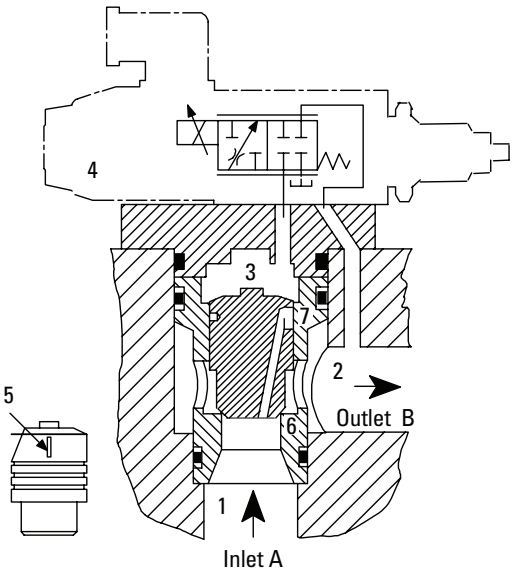

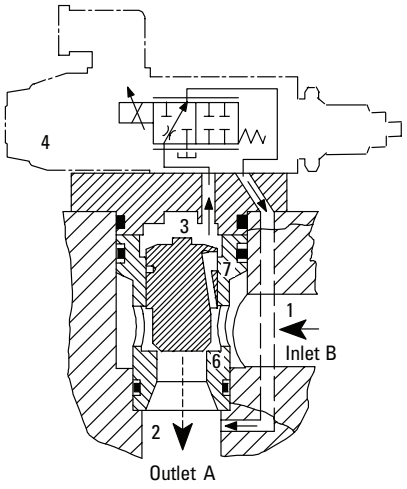

Figure 40

Construction for flow direction B to A; poppet partially open.

(Note: For flow B-A, poppet drilled from B.)

Basic Characteristics

Nominal Sizes:

ISO 7368	DIN 24342
06	NG16
08	NG25
09	NG32
10	NG40
11	NG50
12	NG63

Maximum operating pressure.....350 bar (5000 psi)

Flow ratings.....up to 2160 L/min (571 USgpm)

Catalog data based on pilot valve KTG4V-3S-EN427.

As the main poppet opens, the variable orifice area increases. The slot is a part of one leg of a hydraulic bridge circuit and provides an internal position feedback. With the pilot throttle valve closed (figure 39), there is no pilot flow through the closed-off slot in the seated poppet. The pressure above the main poppet (3) is equal to the pressure at the valve inlet (1), due to the controlled small opening at the variable orifice. As the upper area of the poppet is greater than the area facing the inlet (1), the poppet is held against its seat (6) by a force proportional to the difference between valve inlet and outlet pressures.

Opening the pilot throttle valve (figure 40) lowers the pressure in volume (3) allowing the main poppet to move off its seat. As this occurs the slot passes the metering edge (7), opening the variable orifice and allowing flow through the pilot circuit. Initially the flow through the pilot valve equals the flow through the slot plus the volume displaced by the open-ing movement of the main poppet. The main poppet moves upwards until the pressure drops across the slot and the effects a force balance on the poppet. The poppet is then held in a steady-state condition with equal flow across the slot and the pilot.

If the flow through the pilot valve is reduced (by reducing the command current to the solenoid), the force balance of the main poppet is again disturbed and the main poppet moves downwards reducing the slot area and decreasing flow to the upper chamber until the force balance is restored. Thus by controlling flow through the pilot valve, the main poppet can be controlled in any position from fully closed to fully open. In this manner a very simple, effective servo-control of the main poppet is obtained. If the outlet pressure exceeds inlet pressure when the pilot valve is closed, the main poppet allows reverse flow (see CVCS model code). The main valve function is determined by the type of pilot fitted.

If pressure compensation is added to the pilot stage, the complete valve is pressure compensated. If a pilot relief valve is fitted, the main stage operates as a relief valve. As the pilot flow is returned to the valve outlet (i.e. no "drain" connection) the valve is energy efficient. Therefore the position of the main poppet is controlled by a closed-loop system with a variable orifice in the poppet acting as the internal position feedback element. The command signal in this feedback system is pilot flow, as set at the proportional pilot throttle valve (4).

Features and Benefits

The HFV range with its simplicity, cost effectiveness and performance level can be applied in almost all applications from high performance industrial areas such as injection molding to those applications just requiring proportional functionality.

The data in this catalog is based on the specially developed proportional pilot KTG4V-3S-60-EN427. The functional flexibility of the Valvistor may be extended by the use of different pilots like KBTG4V-3S-60-EN427, KBFTG4V3-3S-60-EN427. Contact Danfoss for application assistance.

In addition, the HFV range offers:

Unequalled simplicity	No inner electrical feedback loop and associated electronics
Two models: for flow direction A to B or B to A	Provides system design options and flexibility
Free flow in reverse direction	Provides system design options and flexibility
Poppet valve construction	Provides tight shut-off and load holding
Internal pilot flow	Simple installation and energy efficient
Very fast response	Provides the system designer with high dynamic acceleration/velocity/deceleration profiles for demanding performance requirements such as: • Cylinder position control including lift/lower • Rotary actuator dynamic control • Velocity profile control
Smooth closing and opening	Shock-free start-up and shut-off allow high velocities to be maintained for longer periods, thus reducing cycle times
Low hysteresis	8% to 1% depending on pilot valve used
Integral feedback	Internal hydraulic feedback provides effective, low-cost position control of main poppet
Repeatability	Provides repeatable and accurate actuator velocity to a given operator command input
Electrical operation	Current-controlled PWM signal
Pressure compensation	Can be achieved by pressure compensating pilot stage only
Cost-effective design	Provides multiple functions such as pressure compensation, flow control and reverse free flow check valve
Optional manual override	Pin design
Compatible with antiwear hydraulic oils and phosphate esters (non alkyl)	Flexible application for broad range of installations
Electrical connections DIN or conduit box	Provides design flexibility to meet OEM or user preference

Inherent benefits of Danfoss cartridge valve technology are applicable to the Valvistor range.

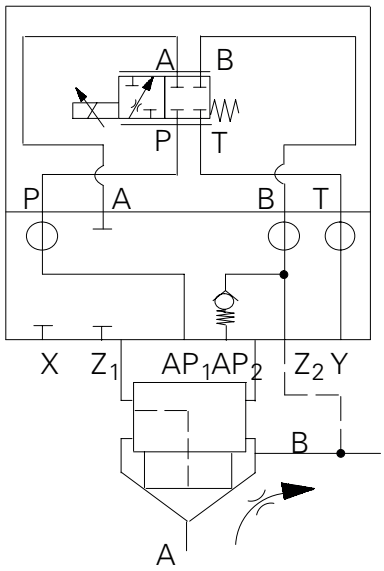

Functional Symbols Valvistor® Proportional Throttle Valves

Complete valve assembly comprises insert, cover and proportional solenoid operated pilot valve (pilot valve to be specified and ordered separately).

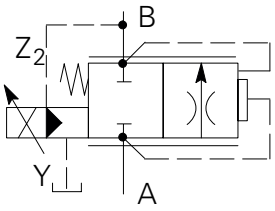

Models without free reverse flow capability

Performance Characteristics

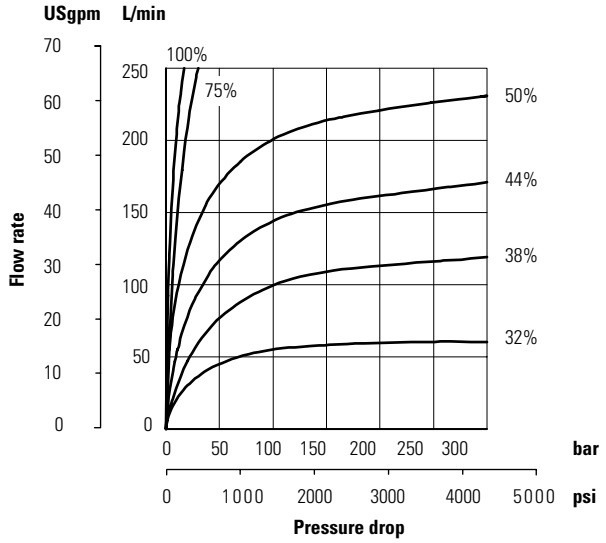

The graphs on the following two pages show typical flow characteristics for different values of input current to pilot valve plot ted against flow rate and valve pressure drop. They are based on a standard HFV insert and cover with a KTG4V-3S---EN427 pilot valve. A minimum pressure drop of 5 bar (72 psi) is recommended. Higher pressure drops result in improved control.

Valvistor® Line Extension

Proportional Slip-in Cartridge Valve, Flow Control
K(B)TG4V-3 Pilot Stage K(B)FTG4V-3 Pilot Stage

Danfoss Vickers® line is now extended with the addition of K(B) TG4V-3 and K(B)FTG4V-3 pilot stage proportional valves. The new features and benefits of the higher performance and on-board electronics (OBE) open up new applications and mar-kets. The valves piloted with K(B)FTG4V-3 offer performance that is close to conventional feedback valves. As its name implies, the Valvistor design has a main poppet valve that amplifies a low flow rate through the pilot circuit, similar to a transistor. This innovative design achieves servo-type control of the main poppet, without using an electrical main poppet position feedback transducer on the Slip-in cartridge valve.

Features and benefits of the new valves include:

- Integral hydraulic feedback on main stage - Closed loop, main-stage performance is achieved without using a main-satge LVDT.
- Pilot stage selected to meet specific requirements - Cost-effective design results in design flexibility.
- Pilot flow is directed to the load - Higher flow efficiency is achieved since the flow is not wasted to the tank.
- IP65 and IP67 environmental protection rated best in class- More reliable performance in harsh environment.
- On board ramp adjustment on KBTG pilot.

Applications include injection and blow molding, rubber molding, press, die-casting, offshore, civil engineering, marine, primary metal, and mobile applications. The tables below show existing Valvistor configurations and the new extended configurations with K(B) TG4V-3 and K(B)FTG4V-3 as pilot valves.

High Performance

Nominal Sizes	**Extended Configuration**		**Extended Configurations**	
Pilot Valve	**Non-OBE Valve**		**OBE Valve**

Electrohydraulic Proportional Throttles
CVU-**-EFP1-3* Series

Basic Characteristics
Valves

Nominal sizes:	ISO 7368	DIN 24342
	06	NG16
	08	NG25
	09	NG32
	10	NG40

Max. operating pressure..... 315 bar (4500 psi)

Flow ratings.....up to 900 L/min (238 USgpm)

Amplifier

Vickers by Danfoss model EEA-PAM-571-A, to be ordered separately. Power input 20-34V DC, 24V DC nominal.

General Description

Proportional throttle (restrictor) valves for use where one or more of the following requirements exist.

- Remote control of machine actuator speed, linear or rotary.
- Speed control in accordance with machine operating cycles or programs.
- Meter-in, meter-out or bleed-off application of the throttle valve itself.
- Pressure compensated flow control with the aid of a pressure hydrostat module, in any of the same three application modes.
- Smooth control of machine acceleration and/or deceleration.
- For industrial and mobile applications.

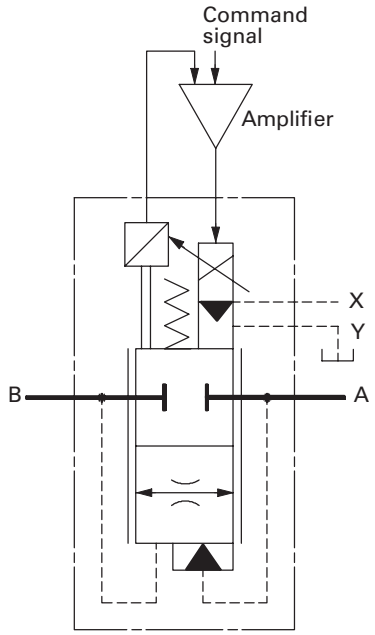

Note: Correct performance of valves can only be obtained using Vickers by Danfoss amplifier EEA-PAM-571-A.

Features and Benefits

- New 09 (NG32) size.
- Valves suitable for unidirectional and bidirectional control of flow.
- 4 valve sizes offer choice of flow capacities
  06 (NG16): 190 L/min (50 USgpm)
  08 (NG25): 450 L/min (119 USgpm)
  09 (NG32): 700 L/min (185 USgpm)
  10 (NG40): 900 L/min (238 USgpm)
  at 10 bar (145 psi) Δp.
- Designed for zero leakage when closed.
- Common amplifier for any valve size minimizes inventory.
- 24V DC nominal supply to amplifier to suit state-of-art control systems.
- Choice of command signals.
- Acceleration and deceleration requirements can be adjusted on-site by "ramp" potentiometer.
- Facility for on-site adjustment of "deadband" compensation and "gain".
- Setting-up and fault diagnosis eased by panel display and signal monitoring points.

Wiring Connections

Customer's protective ground connection.

WARNING

Electromagnetic Compatibility (EMC)
It is necessary to ensure that the unit is wired up in accordance with the connection arrangements shown. For effective protection the user's electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

WARNING

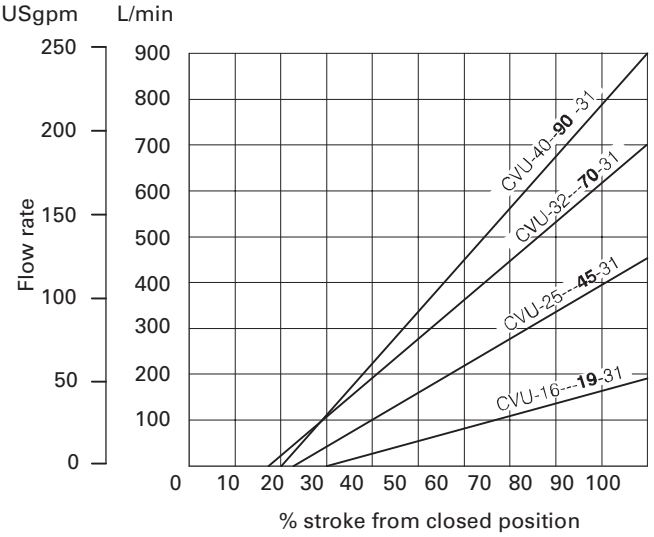

All power must be switched off before connecting or disconnecting any plugs.

Operating and Performance Data
Electrohydraulic Proportional Throttles

Performance data is typical with fluid at 36 cSt (168 SUS) and 500C (1220F)				
Pressure ratings:				
Ports A, B, X	315 bar (4500 psi) max.			
Port Y	≤2 bar (29 psi)			
Cracking pressure: (see diagram on next page for valve area ratios)				
For flow A to B	2,5 bar (36 psi)			
For flow B to A	6,5 bar (94 psi)			
Flow ratings A to B/B to A	See Model Code 8 on previous page			
Spool overlap, deadband typical				
CVU-16	30% of full stroke			
CVU-25	23% of full stroke			
CVU-32	18.5% of full stroke			
CVU-40	20% of full stroke			
Peak solenoid current at 50°C (122°F) ambient				
Nominal	2.2A (13.6W)			
Max.	2.9A (18W)			
Solenoid coil resistance at 20°C (68°F)	2.8Ω			
Relative duty factor	Continuous rating (ED = 100%)			
Electrical protection with plugs fitted	IEC 144 class IP 65			
Dynamic performance (using amplifier EEA-PAM-571-A-33)	CVU-16	CVU-25	CVU-32	CVU-40
• Step input response: valve stroke between zero overlap and fully open 100 bar (1450 psi) at ports A, B and X				
Opening time	40 ms	60 ms	80 ms	125 ms
Closing time	50 ms	60 ms	80 ms	125 ms |
• Frequency response	See next page			
• Hysteresis	<1%	<1%	<1%	<1%
• Repeatability	±0.5%	±0.5%	±0.5%	±0.5%
Mass	3,3 kg (7.3 lb)	4,1 kg (9.0 lb)	6,5 kg (14.3 lb)	8,0 kg (17.7 lb)

Flow/Stroke Characteristics

At Δp = 10 bar (145 psi)

For a given input signal value the characteristics of the valve approximate to the theoretical square-law relationship for sharp-edged orifices:

$$\Delta p_x = \Delta pr \bullet \left(\frac{Q_x}{Q_r} \right) 2$$

Where Δp_x = Pressure drop for required flow rate Q_x

Δp_r = Pressure drop at rated current

Q_x = Flow rate for which Δp_x is to be calculated

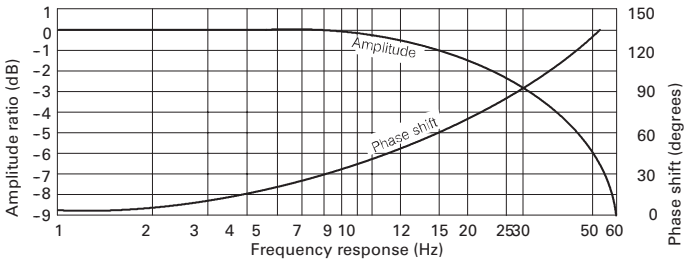

Q_r = Flow rate at rated current

Electrohydraulic Proportional Throttles
CVU-**-EFP1-3* Series

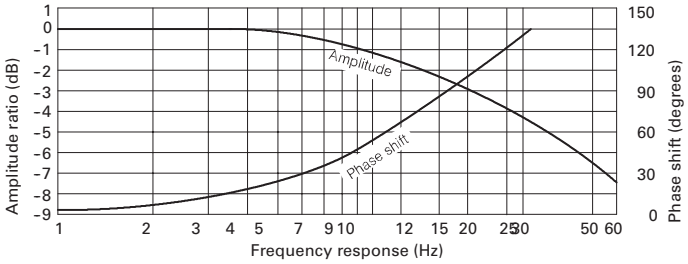

Frequency Response

Typical at PA = PB = 100 bar (1450 psi) and at zero flow. Based on operating valve about the 50% stroke position with a sinusoidal input signal of ±10%

CVU-40-EFP1---3*

Valve Area Ratios

Hydraulic Fluids

All cartridge valves can be used with antiwear hydraulic oils, and certain low viscosity fluids. Add prefix "V" to model designations when phosphate ester (not alkyl-based) or chlorinated hydrocarbons are to be used. The extreme viscosity range is from 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is from 54 to 13 cSt (245 to 70 SUS). For further information about fluids, see "Technical information" leaflet B-920.

Temperature Limits

Ambient min ..... 20˚C (-4˚F)

Ambient max ..... +70˚C (+158˚F)

Fluid temperatures

	Petroleum Oil	Water Containing
Min.	–20˚C (–4˚F)	+10˚C (+50˚F)
Max.	+80˚C (+176˚F)	+54˚C (+129˚F)

Filtration Requirements

Bolt torque	26 lbf ft	81 lbf ft	210 lbf ft	370 lbf ft

Connections to Port X

For unidirectional control of flow (ie A to B or B to A) port X must be connected to upstream port pressure. For bidirectional control of flow (ie flow A to B and B to A at different times during an operating cycle) port X must be connected to both A and B via a shuttle valve (see diagram).

▲ Installation dimensions below mounting surface, including location of ports "X" and "Y" and size/length of bolts "H", conform to requirements of ISO 7368---A (see page 123).

■ Connect to drain: pressure must not exceed 2 bar (29 psi).

• See "Connections to Port X", this page.

General Description

These cartridge valves are integral assemblies of cover and insert with a main spool that is fully seated in its closed position. A coaxially mounted switch on the top cover provides a signal when the main spool is in position to close the mainstream flow.

On all models a spring holds the main spool in the closed position, requiring a small pressure to create flow through the valve. Pilot pressure from either a remote source (SWD models), or from a valve mounted directly onto the cover (SWD3 models) can be used to hold the spool fully closed. The "Dynamic" models, ZSWD3, with pilot operation of both opening and closing, cater for applications requiring fast response.

Flow can be in either direction (i.e. A to B, and B to A). The SWD(3) range is specifically designed for application in circuits and systems where electrical signalling of a known (closed) condition of the valve is required. The design of the main spool ensures that both switch indications, i.e. "valve closed" and "valve open", occur when the valve is closed to mainstream flow.

Features and Benefits

- Accurate and repeatable switching points.
- Integrated and pre-set switch assembly, with pressure-tight core tube, requires no setting adjustments to be made at installation.
- Bidirectional flow capability, simplifies manifold block design.
- "Dynamic" version ensures positive opening and closing.
- "Dynamic" version offers fast response times.
- Absence of spool seals improves reliability.
- Robustly protected switch assembly.
- Normally open and normally closed switch contacts.
- Overload and polarity protected.
- Conforms to ISO 7368.

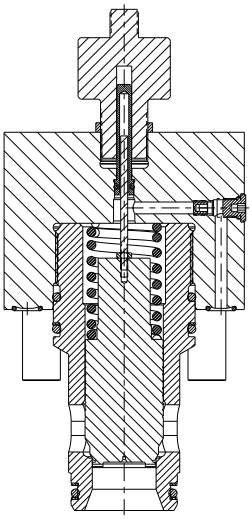

CE

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC). For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers by Danfoss Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by Electromagnetic Compatibility (EMC).

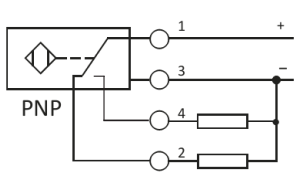

Typical Sectional Arrangements

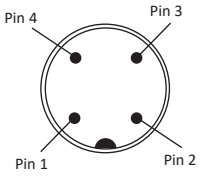

Tapped port for installation of additional orifices.

ZSWD(3) Size 16 to 40 available in -10 design

Installation dimensions unaltered for design numbers 10 and 20.

Typical Model Selection

For applications requiring a valve for a flow rate of 615 lpm (162 US gpm) with remote pilot, main spool cracking pressure of 2,5 bar (36.3 psi) and metric bolts, select: CVU-25-SWD-B29-M-20 For applications requiring electrical indication of spool position for a flow rate of 3000 lpm (792.5 US gpm) with integral pilot operation, main spool cracking pressure of 5,0 bar (72.5 psi) and UNC bolts, select: CVU-50-SWD3-B29-H-20 bolt kit BKDNG50708 For applications requiring electrical indication of spool position with hydraulic pilot operation for opening and closing, a flow rate of 600 lpm (158 US gpm), main spool cracking pressure of 0,5 bar (7.3 psi) and metric bolts, select: CVU-32-ZSWD3-B29-L-10

Operating Data

Maximum Pressures All ports: 420 bar (6090 psi) in case of -20 design, 315 bar (4500 psi) in case of -10 design (-10 design available for models ZSWD3). Actual allowable pressure for some or all ports may be limited by the pressure rating of the selected pilot valve to be used on SWD3 models.

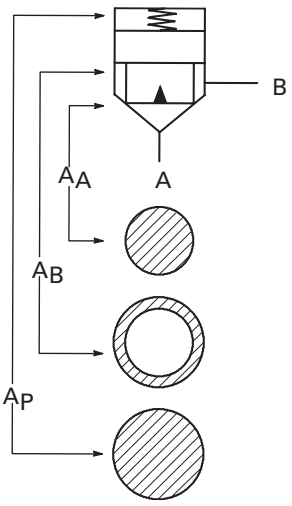

Flow Rates CVU-**-SWD(3)-20

Flow direction A to B, or B to A, with main spool piloted open and at 10 bar (145 psi) pressure drop between A and B.

Flow Rates	A to B	B to A
CVU-16	325 lpm (85.5 US gpm)	295 lpm (78 US gpm)
CVU-25	615 lpm (162 US gpm)	570 lpm (150 US gpm)
CVU-32	1250 lpm (330 US gpm)	895 lpm (235 US gpm)
CVU-40	1925 lpm (510 US gpm)	1200 lpm (315 US gpm)
CVU-50	3440 lpm (910 US gpm)	3060 lpm (810 US gpm)
CVU-63	5625 lpm (1485 US gpm)	5010 lpm (1325 US gpm)

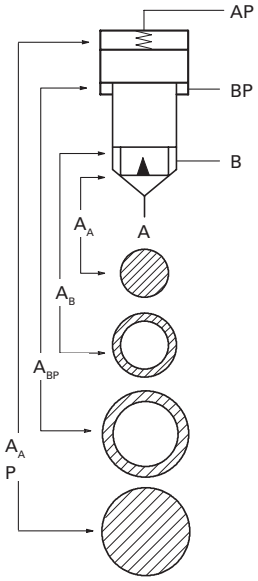

See pressure drop graphs for further data.

Switching Positions Relative to Main Spool Position

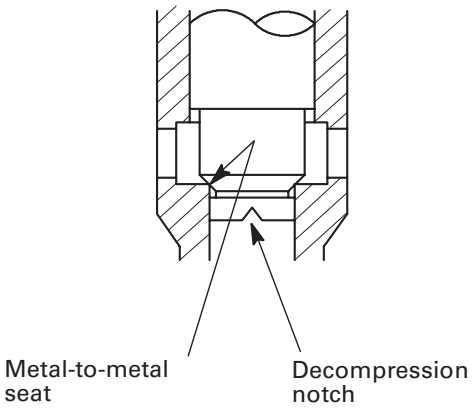

Figure 41

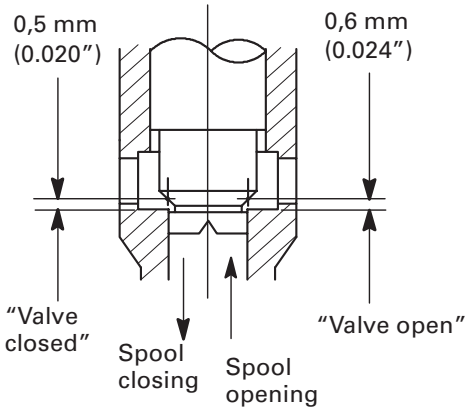

Figure 42

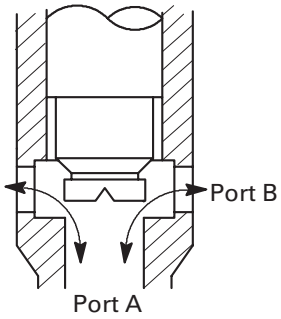

Figure 43

Figure 41: Valve fully closed by hydraulic pilot pressure and/or spring. Spool is fully seated in the sleeve.

Figure 42: When the spool is closing the "valve closed" switch indication occurs 0,5 mm (0.020) before the spool reaches the valve seat.

When the spool moves off its seated position the "valve open" indication occurs when the spool has travelled approx. 0,6 mm (0.024).

At both of these positions the main flow path A–B is closed. There is a small amount of spool travel between these switching points and the decompression notch opening/closing.

The clearance between the spool end and the "A" port diameter is closely controlled to minimize leakage flow at the "valve open" switch point, see "Quiescent Flow" on next page.

Figure 43: The fully open spool allows full flow path A to B, or B to A.

Performance Data Directional Valves with Electrical Indication

Typical with oil at 21 cSt (102 SUS) and at 50 C 122 F) unless otherwise indicated. For pressure drops at other viscosities, see page 118.

Quiescent Flow

These valves are fully seated in the closed position. Maximum flow A to B, or B to A (at the "valve open" switch indication position, see Figure 42 on previous page), at 100 bar (1450 psi) pressure differential A to B (or from B to A):

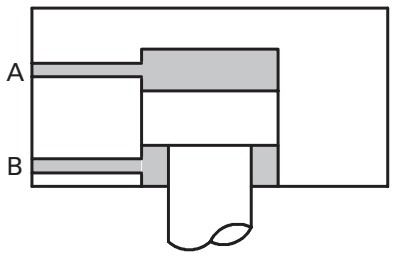

Valve Size Max.	Leakage Flow Rate:	L/min.	(USgpm)
16		2,0	(0.53)
25		3,0	(0.8)
32		4,0	(1.06)
40		6,0	(1.6)
50		12,0	(3.2)
63		18,0	(4.8)

Displacement volumes, ZSWD3 models

Total trapped volumes (up to size 3 mounting face) and displaced volumes for spool opening and closing stroke.

Volumes in cm^3 (in^3)

Nominal Size	At port A: Total Vol. Spool Closed	Stroke Vol.	At port B: Total Vol. Spool Open	Stroke Vol.
16	6,44 (0.39)	2,05 (0.13)	2,45 (0.15)	0,43 (0.03)
25	13,59 (0.83)	4,73 (0.29)	4,40 (0.27)	0,95 (0.06)
32	27,49 (1.68)	11,79 (0.72)	6,69 (0.41)	2,29 (0.14)
40	44,34 (2.70)	21,38 (1.30)	9,92 (0.61)	4,23 (0.26)

Hydraulic Fluids

These valves are suitable for use with hydraulic oils, water-inoil emulsions and water glycols. The extreme operating range is from 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

Temperature Limits

Ambient:
Minimum – 20°C (– 4°F)
Maximum +80°C (+176°F)

Fluid temperature

Petroleum Oil Water-Containing
Min. –10°C +10°C
(+14°F) (+50°F)
Max.* +80°C +54°C
(+176°F) (+129°F)

Filtration Requirements

See page 17.

Mounting Attitude

Unrestricted.

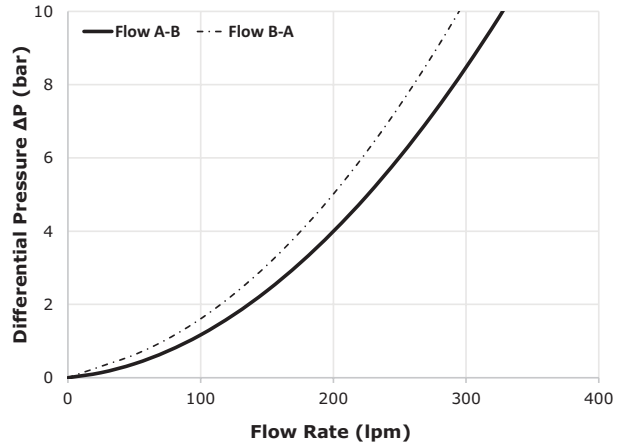

* To obtain optimum service life from both fluid and hydraulic system, 650 C (1500 F) is the recommended maximum fluid temperature, except for water-containing fluids.

For synthetic fluids consult fluid manufacturer or Danfoss where limits are outside those for petroleum oil.

CVU--ZSWD3**

Standard, Factory Fitted Orifices

Standard orifices fitted in model types SWD and SWD3 are sized to optimize valve dynamics with low shock characteristics over a wide range of system parameters. In model types CVU-**-SWD3 provision for orifice Z1 caters for additional tuning. If it is necessary to change the size of orifice AP then consult your Danfoss representative for information on correct dismantling and re-assembly procedures.

Ordering Procedure

Order by model code and quantity. Note that size 03 pilot valves for mounting on to SWD3 and ZSWD3 models (and their mounting bolts) must be ordered separately.

Special Function Valves

General Information

Special function cartridge valves are:

- 1:0.25 area ratio cartridge for low pressure relief and
- Directional function model CV**-**-C025

This section of the catalog includes circuitry for applying hydrostat functions to flow control throttles, using standard cartridge relief components and control modules.

1:0.25 Area Ratio
Cartridge: Sizes 16 to 40

This cartridge arrangement has a 1:0.25 area ratio and operates with a pilot flow entering at X, the pilot flow rate being governed by the integral pressure compensated flow control. See Figure 44. Pilot flow passes out of Z1 to an appropriate pilot relief valve which creates pressure on the top of the pilot piston. This means the main valve will open at, and maintain, a pressure at A of 25% of pilot pressure.

When used with an electrohydraulic proportional pressure control (connected to Z1 port), pressures as low as 1,5 bar (22 psi) are controllable at port A, making it ideal for plastics injection molding machine applications. The area ratio of the large piston to sleeve seat is 1:1.1. The Z1 port should never be blocked; doing so could result in pressure intensification at this port. This low pressure relief valve can also be used as a directional control back pressure valve, or as a blocking valve.

When the back pressure function is operational, port Z2 must be drained to the reservoir. The valve can be locked shut by applying at Z2 a pressure greater than any at A.

The following models are available; insert and cover are ordered separately:

Cover	Insert
CVCS-16-C025-*-30	CVI-16-C025-50
CVCS-25-C025-*-30	CVI-25-C025-50
CVCS-32-C025-*-30	CVI-32-C025-50
CVCS-40-C025-*-30	CVI-40-C025-50

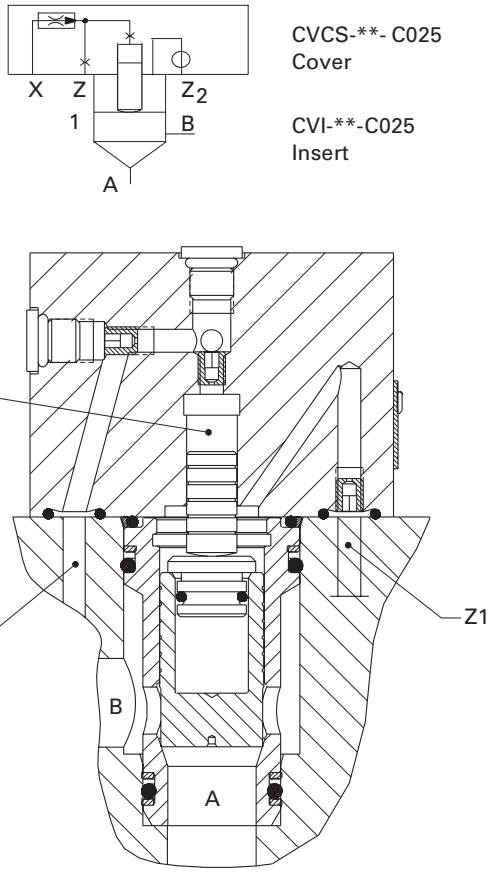

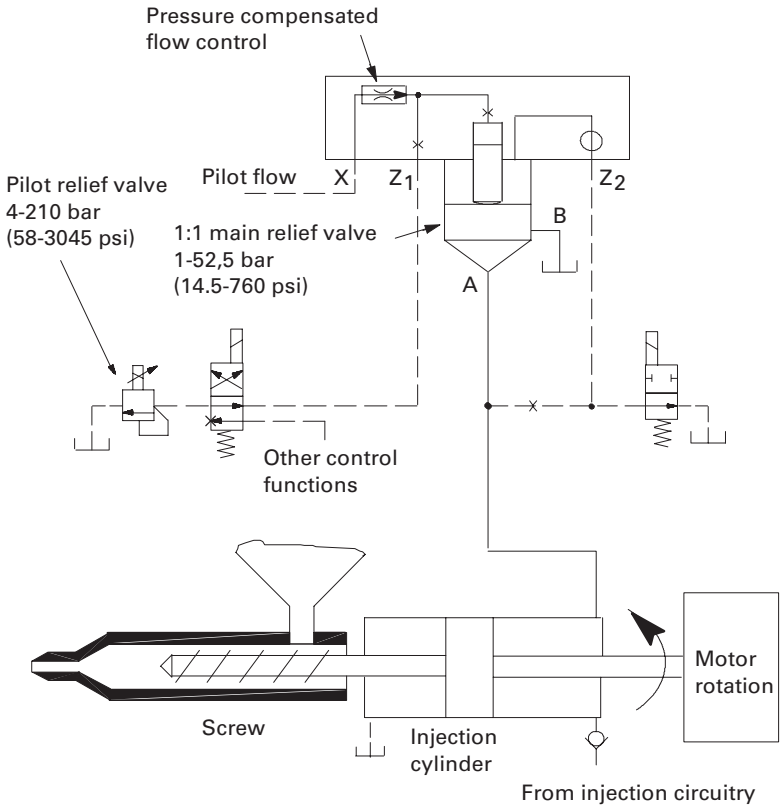

Figure 44

Typical Application
Plastics Injection Molding

Normally Open Prefill Valve:
Sizes 25, 32, 40, 50 and 63

Normally open cartridge valves require an external pilot signal to close the valve against system pressure. This valve range is ideally suited for applications requiring a prefill valve or decompression valve.

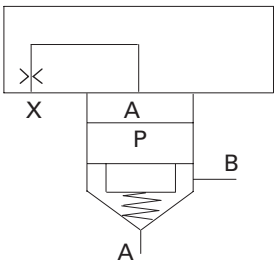

The main spool consists of a sleeve with a sharp edged seat and a piston. A spring holds the piston in the open position. Pressure at control port X forces the poppet against the spring to close the valve.

Sizes 25, 32, 40, 50 and 63

Area ratios are defined as 1:1.05. Pressure to close = 2,5 bar (36.3 psi) + P_A + 0.05 P_B.

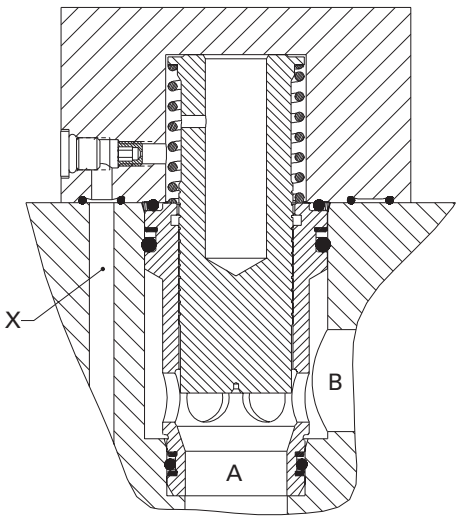

Figure 45

Hydrostat Functions for Use in Fixed Delivery Pump Systems

Where the flow rate through a throttle is required to be independent of variations in load and/or system pressure, a hydrostat function should be designed into the system. A 3-way, bleed-off hydrostat can be built from standard relief valve elements presented in this catalog. The adjacent diagrams, Figures 46, 47 and 48, show the circuitry of a 3-way hydrostat together with three control options.

Figure 46. The pressure drop across the proportional throttle can be varied by adjusting the setting of the pilot relief valve in the CVCS-**-C type cover (see page 41). Normally, with the flow rate through the proportional throttle being less than the pump delivery, excess pump flow will be by-passed through the cartridge insert (flow A to B) to reservoir.

Variations in load and/or system pressure will increase or decrease flow across the pilot relief valve, thereby causing the spool of the insert to move to either increase or decrease the by-pass flow to re-establish the correct differential pressure across the throttle.

A separate main system relief valve (not shown) should be provided for controlling the maximum system pressure.

Figure 47. The CVCS-**-C cover and CVI-**-D10 insert here act as the maximum pressure relief valve. A sensing line is taken from auxiliary port Z1 to a separate module which controls the pressure differential.

Figure 48. By using a type CVCS-**-C3 over (integral interface for size 3 pilot valve), a proportional pressure control valve KCG-3 allows the maximum pressure to be varied from a suitable electrical signal. A typical application would be where the final holding pressure on an actuator needs to be varied (e.g. curing/setting time).

See "Fluids and Seals" on page 15.

5 Design number 30 series

See page 115 for sizes of factoryfitted standard orifices. Other orifice sizes and locations can be fitted by special arrangement with your Danfoss representative. Non-standard orifice requirements should be defined as follows:

6 Pilot control orifice location and size

See table below for pilot control orifice locations, as per Function selected. The letter 'S' in brackets specifies standard factory-fitted orifice associated with that location. The letter 'S' should be included in the model code wherever standard orifice is required. Letter 'Z' in brackets indicates that no orifice plug is fitted, whereas letter 'A' indicates blocked port.To specify non-standard orifice sizes, refer table on page 116.

Function	Location 1	Location 2	Location 3	Location 4
C025	AP(S)	Z1(S)	Z2(Z)	-
OD	X(S)	-	-	-
OD3	X(S)	A(Z)	Z1(Z)	Z2(Z)

Letter in brackets to be mentioned in the model code at appropriate orifice location.
Refer pages 6 and 7 for pictorial representation of orifice locations.

} 10 L/min (2.6 USgpm) at △p = 5 bar (72 psi)

Mounting interface ISO 4401 size 03 (with additional orientation pin); ANSI/B93.7M-D03

General Description

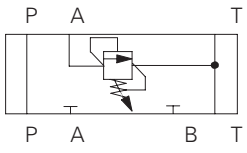

A range of pressure relief, shuttle and pilot operated check functions provide additional functions allowing pilot control circuitry to be directly mounted on to the size 03 mounting face of CVC(S) covers, either with, or independent of, a solenoid operated pilot valve. Their design and port connections are specific to their use in piloting cartridge valves.

These six modules were designed to satisfy the needs of Danfoss application and systems engineers in providing effective solutions to a wide variety of pilot control requirements in cartridge valve systems.

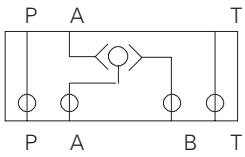

For other useful size 03 pilot control modules see Vickers by Danfoss SystemStakTM valves type DG**M-3, see BC430856919687en-000101.

Application of Pilot Control Modules

The examples of uses for control modules shown on the next page are taken from actual applications, and serve to illustrate the types of control circuitry that can be built directly on to the size 03 interface of the cartridge valve covers. For assistance with other possible applications for size 03 control modules, contact your Danfoss representative.

Pressure Control with Remote Electrical Selection

Figures 51 and 56 show pressure relief functions based on the directional cover type D1/D3. In Figure 51 the system is vented when the solenoid of the pilot valve is de-energized; when the solenoid is energized the system pressure is limited to the setting of the CVGCA-3 module.

In Figure 52 the system is vented when both solenoids of the pilot valve are de-energized. The maximum system pressure is set at the CVGCPA-3 module and selected by energizing solenoid “b”. A lower pressure is set by the CVGC-3 module and selected by energizing solenoid “a”.

Direction Control Options

Several direction control functions are possible by using the shuttle and pilot-operated check modules.

In Figure 53 the cartridge valve insert functions as a pilot-operated check valve. At all times flow is possible from A to B. Flow from B to A is possible only when port Z2 is pressurized.

In Figure 54 flow is not possible from B to A. Flow from A to B is possible only when there is no pressure at port Z2; the insert is locked closed when pressure is applied at port Z2.

In Figure 55 the solenoid-operated pilot control valve is mounted directly on to the control module. Flow A to B is possible only when the solenoid is energized. At no time is flow from B to A possible.

Figure 56: The addition of the pilot-operated check module CVG-PC1-3 to the electrically monitored model type CVU-**- ZSWD3 adds a further degree of security to a gate guard control system. Pressure at port B holds the main spool tightly closed until an external pilot pressure is applied to port Z2. This pilot pressure unseats the pilot-operated check module to open AP to port Y, and at the same time opens the main poppet.

Model Codes Pilot Control Modules

Relief Functions

(F3-)	CVG	***	3	*	***	1*
1	2	3	4	5	6	7

1 Seal material

F3 - Special seals. See "Fluids and Seals" on page 15. Omit for standard seals.

2 Model

CVG - Cartridge valve module, gasket mounted

3 Function and circuitry

C - Relief module; function P-T

CA - Relief module; function A-T

CPA - Relief module, function P and A-T

4 Interface (ANSI/B93.7M-D03)

3 - ISO 4401, size 03

5 Type of pressure adjustment

K - Micrometer adjuster with keylock

M - Micrometer adjuster without lock

W - Wrench adjustment with hex locknut

6 Adjustable pressure range

125 - 3–125 bar (44–1800 psi)
250 - 5–250 bar (73–3600 psi)
350 - 8–350 bar (116–5000 psi)

7 Design number, 1* series

Subject to change. Installation dimensions unchanged for design numbers 10 to 19 inclusive.

A hyphen '-' to be used for separating features in model code. A generic model code would look like: ****-CVG-***-3-*-***-1***

Auxiliary Functions

(F3-)	CVG	**1	3	[P*-T*-A*-B*]	**
1	2	3	4	5	6

1 Seal material

F3 - Special seals. See "Fluids and Seals" on page 15. Omit for standard seals.

2 Model

CVG - Cartridge valve module, gasket mounted

3 Function and circuitry

See "Functional Symbols" for precise circuitry connections

S1 - Shuttle valve with size 03 interface on one side only

MS1 - Modular shuttle valve (size 03 interface on both sides)

PC1 - Pilot operated check function with size 03 interface on one face only

4 Interface (ANSI/B93.7M-D03)

3 - ISO 4401, size 03

5 Orifice selections

Non-standard assemblies (e.g. modules with fitted orifices) may be supplied by special arrangement. Please consult your Danfoss representative before ordering.

Typical examples include:

P08 / PF - Orifice size 0,8 mm in P line

T06 / TD - Orifice size 0,6 mm in T line

B09 / BG - Orifice size 0,9 mm in B line

A10 / AH - Orifice size 1,0 mm in A line

Specify orifice requirements by port location(s) followed by orifice code or two numerals (see table on page 116) e.g. P07-B09.

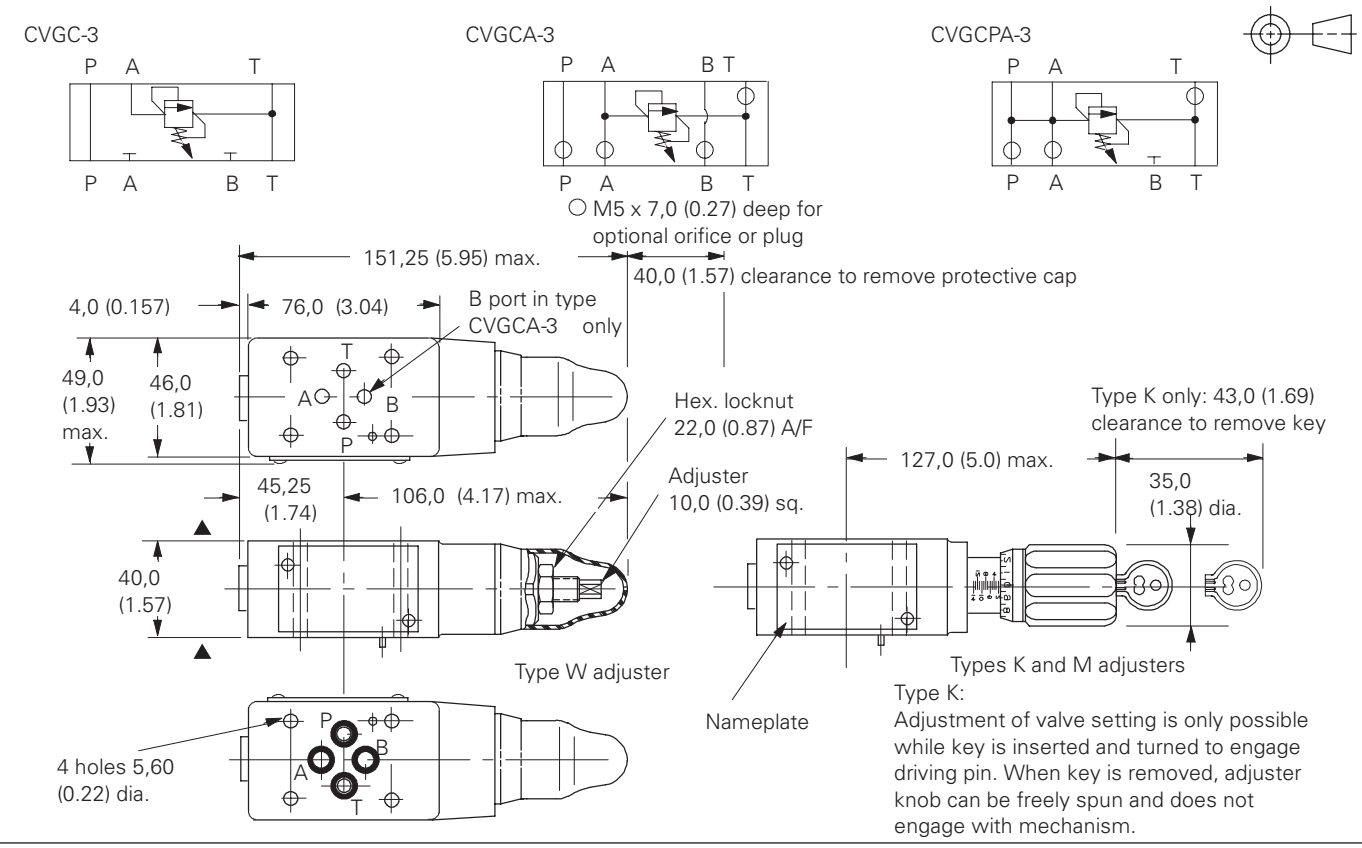

6 Design number

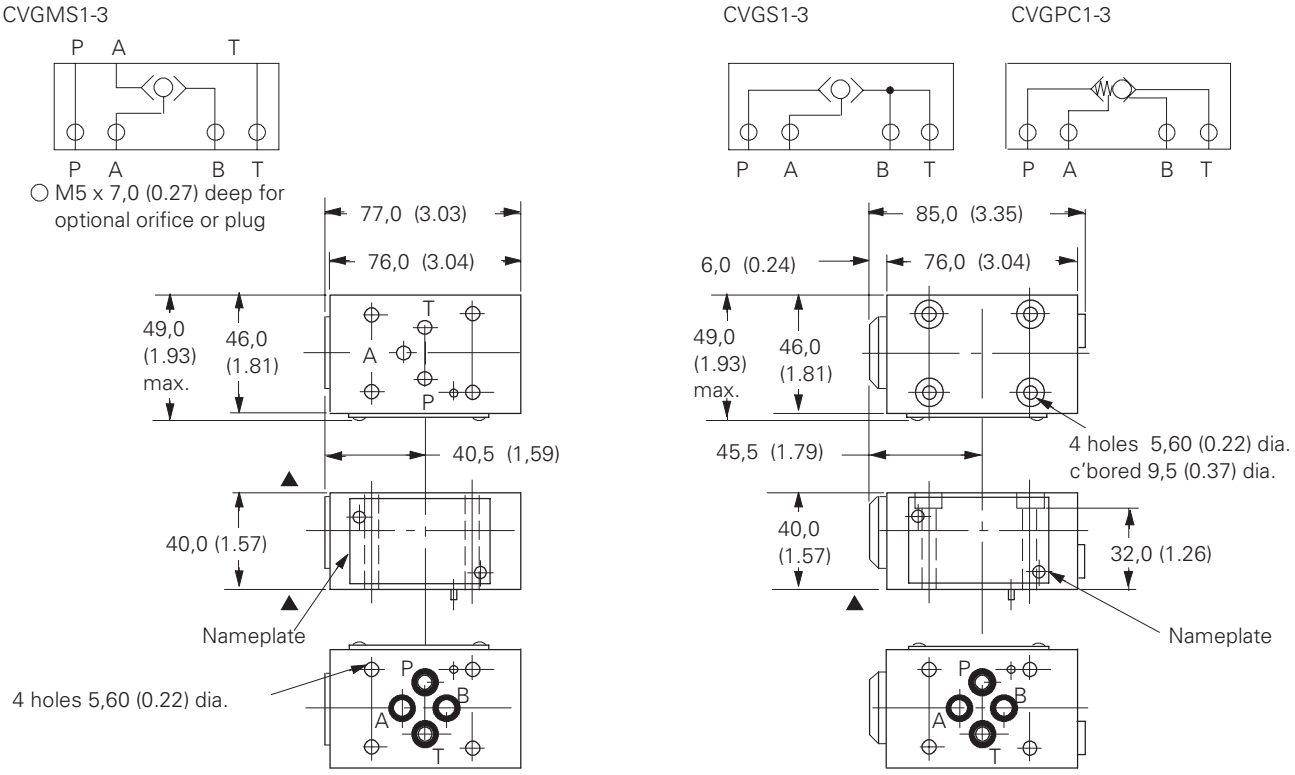

1* series - For types S and MS

2* series - For type PC Subject to change. Installation dimensions unchanged for design numbers 10 to 19, or 20 to 21 inclusive.

A hyphen '-' to be used for separating features in model code. A generic model code would look like: ****-CVG-**1-3-P*-T*-A*-B*-****

Pilot Control Modules

▲ Mounting surface conforms to ISO 4401, size 03 (with additional orientation pin/pin hole); ANSI/B93.7M-D03.

Supplementary Data

Standard Factory-Fitted Orifice Sizes (mm)

Sizes and locations of standard factory-fitted orifices. Other orifice sizes (and other locations) can be fitted by special arrangement with your Danfoss representative. Non-standard orifice requirements should be defined according to CVCS and CVI model codes. For available orifice kits, which should be ordered separately, see next page.

■ Order orifices/plugs by kit number. Kit contains three of each orifice and plug indicated

Fitting New Orifice Plugs

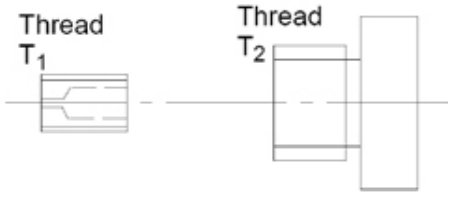

Fitting New Orifice Plugs When fitting new orifice plugs the following assembly instructions should be observed:

1. Do not re-use any orifice plug that has been removed from an assembly.
2. Parts must be assembled in dry conditions.
3. Apply a thin coating of Loctite grade 222 (or equivalent) to the internal thread only.
4. Do not apply Loctite (or equivalent) to the orifice plug.
5. Assemble the plug, tightening to the recommended torque level (see "Assembly Torques" tables).

Assembly Torques

Orifice plug

External closure plug as applicable

External closure plug, Torque, lbf ft inch thread T_2	
5/16"-24 UNF	7 to 7.5

G 1/4"	19,8 to 20,2
G 3/8"	38,8 to 39,2
G 1/2"	58,8 to 59,2

Orifice Sizing Guide

Use Figure 57 to approximate the opening and closing times of poppets with different size orifices. From the chart, determine the cartridge valve's insert poppet area, poppet stroke, and resultant displacement volume. The chart shows full stroke displacement of poppets having 1:1.5 and 1:1.05 area ratios.

From the curves, determine pressure drop across the orifice. For example, if there is a 140 bar (2000 psi) p across a 0,5 mm orifice in a 25 mm valve, the poppet will travel its full stroke in about 200 milliseconds.

The calculation provides a starting point for determining the right orifice for the application. The final determination is the application itself, and fine tuning should be done on the machine installation.

$$\frac{\text{Displacement } (in^3) \times 60 \text{ (sec/min)}}{\text{Flow rate } (in^3/min)}$$

$$\frac{(0.27\ in^3)\ (60\ sec/min)}{80\ (in^3/min)} = 0.200\ sec$$

$$\frac{\text{Displacement } (cm^3) \times 60 \text{ (sec/min)}}{\text{Flow rate } (cm^3/min)}$$

$$\frac{(4,42\ cm^3)\ (60\ sec/min)}{1300\ (cm^3/min)} = 0,200\ sec$$

Valve Size	Poppet area AP mm²	stroke▲ in²	Nominal poppet mm	Displacement in	cm³	in³
16	283.53	0.44	9.0	0.35	2.55	0.15
25	615.75	0.95	11	0.45	6.77	0.43
32	1017.88	1.58	14	0.55	14.25	0.87
40	1661.90	2.58	19	0.75	31.57	1.94
50	2463.01	3.82	21	0.83	51.72	3.17
63	3848.45	5.97	23	0.90	88.51	5.37

▲ The stroke of some poppet types varies slightly from the figures given. However, this data is valid for estimating response times for standard insert types C10F, D105(V) and **16, using above formulae. For response data of dynamic models type ZD(N)105, see page 69.

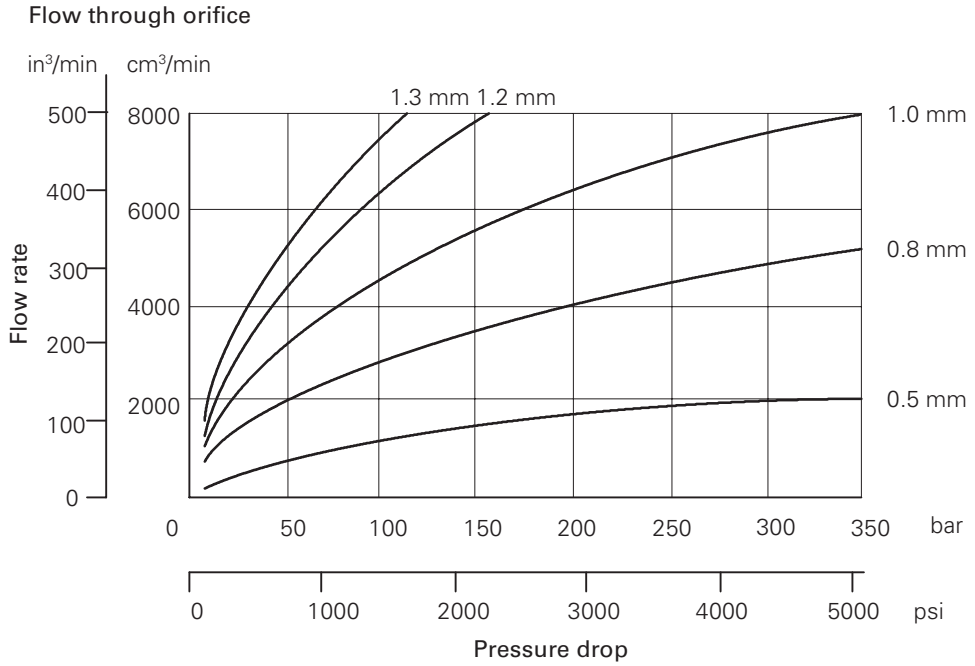

Figure 57

Pressure Drop at Other Viscosities

Pressure drop data in this catalog is generally given for a fluid viscosity of 36 cSt (168 SUS). For model types CVU-**(Z) SWD(3) the reference viscosity is 21 cSt (102 SUS). The graph shows the approximate change in pressure drop for a range of other viscosities. To determine the pressure drop for any given viscosity, multiply the published value by the factor applicable to the required viscosity.

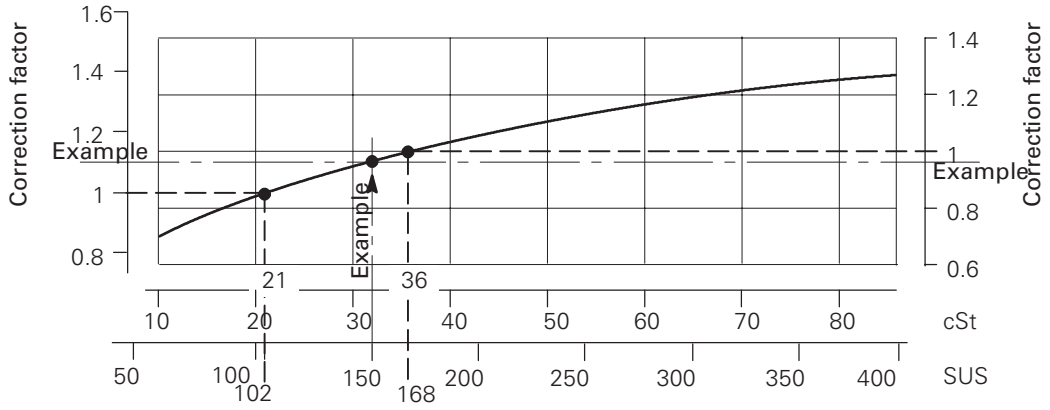

For an actual fluid viscosity of 32 cSt (150 SUS), the pressure drop correction factors are:

– approx. 1.1 to be applied to 21 cSt (102 SUS) data
– approx. 0.95 to be applied to 36 cSt (168 SUS) data

Example Shown

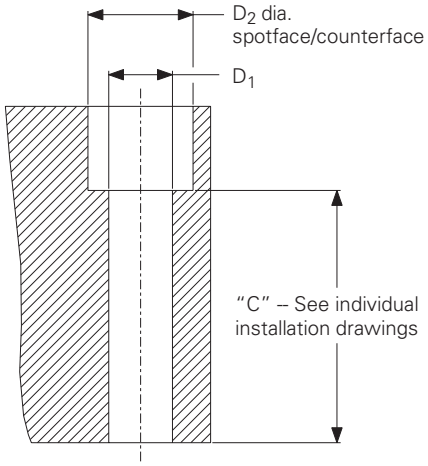

Apply to data given at
21 cSt (102 SUS)

Insert Cavity Dimensions to ISO 7368, Sizes 16 to 63

Vickers by Danfoss cartridge valve covers (type CVCS), inserts (type CVI) and complete units (type CVU) conform to installation requirements of ISO 7368 and DIN 24342.

Dimensions mm (inches)

Section Z-Z

ZRa	0,8 micron (32 microinches)					

● Minimum space required for slip-in valve (insert) and its cover. Also minimum center line to center line distance for two identical cavities in a manifold block

■ Dimensional tolerance is ± 0,2 (0.008).

Ordering Procedure

Ask your Danfoss representative to present a quotation for a cartridge valve system tailored to your application, or to quote on the appropriate model numbers in this catalog. System components must be ordered by complete model numbers. Covers, inserts, pilot valves, modules, and mounting bolt kits must be specified separately.

Typical Examples
Check Valve

A check valve function for 200 L/min (53 USgpm) as seen in Figure 9, to metric standards, order:

– One (1) CVCS-16-N-20 cover
– One (1) CVI-16-D16-M-50 insert
– One (1) BKDNG16-700 bolt kit (for cover)

Relief Function

A proportional relief function for 450 L/min (119 USgpm) as seen in Figure 27, to inch standards with size 03 interface, and with a screw and locknut for up to 250 bar (3600 psi), order:

– One (1) CVI-25-D10-H-50 insert

– One (1) CVCS-25-C3-W250-20 cover

– One (1) KCG-3-250-U-H1-10 pilot valve

– One (1) BKDPNG25-704 bolt kit (for cover)

– One (1) BKDG3-699M bolt kit (for pilot valve)

Unloading Function

An unloading valve for 700 L/min (185 USgpm) as seen in Figure 31, with wrench adjuster for a range up to 125 bar (1800 psi), to metric standards and no size 03 interface, order:

– One (1) CVCS-40-U-W125-20 cover

– One (1) CVI-40-U-50 insert

– One (1) DG4V-3-2A-60 pilot valve

– One (1) BKDPNG40-707M bolt kit (for cover)

Reducer Function

A reducing valve for 500 L/min (132 USgpm) as seen in Figure 32, with micrometer adjuster for a range up to 350 bar (5000 psi), to inch standard and with size 03 interface for venting, order:

– One (1) CVI-32-X2-50 insert

– One (1) CVCS-32-X3-M350-20 cover

– One (1) DG4V-3-2AL-60 pilot valve

– One (1) BKDNG32-713 bolt kit (for cover)

– One (1) BKDG3-699M bolt kit (for pilot valve)

Dynamic Function

A dynamic valve for 200 L/min (53 USgpm) as seen in Figure 36, without stroke adjuster, to inch standard, order:

– One (1) CVI-16-ZD105-M-10 insert

– One (1) CVCS-16-ZD1-S2-10 cover

– One (1) DG4V-3-2A-60 pilot valve

– One (1) BKDNG16-712 bolt kit (for cover)

– One (1) BK590716 bolt kit (for pilot valve)

Proportional Flow Control

A proportional throttle valve for 700 L/min (185 USgpm) as seen on page 87, order: (with extra standard seal kit)

– One (1) CVU-32-EFP1-B29-70-30

– One (1) BKDNG32-713

– One (1) 02-157615

Valvistor

The component parts of the Valvistor proportional throttle assembly, including the pilot control valve, must be ordered individually. In addition there is a choice of electronics: typically a Vickers Eurocard drive amplifier, alternatively a Vickers 12V DC or 24V DC proportional power plug. The full model code must be specified in all cases.

Typical Valvistor Component Selection

1 x CVI-**-HFV-20-*-**-10 insert, see BC444864371497en-000101
1 x CVCS-**-HFV**-*2*-10 cover, see BC444864371497en-000101
1 x cover mounting bolt kit u, see BC444864371497en-000101
1 x KTG4V-3S- - - 60-EN427, see product catalog BC456076143594en-000101
1 x pilot valve mounting bolt kit, see product catalog BC456076143594en-000101

Plus:

Drive Electronics for 24V DC System

1 x EEA-PAM-523-A-33 Eurocard amplifier, see catalog BC444273273086en-000101

or

1 x EHH-AMP-702-*-*-*-1-30 proportional power plug, see catalog BC525935662695en-000101

Drive Electronics for 12V DC System

1 x EHH-AMP-712-*-*-*-1-30 proportional power plug, catalog BC525935662695en-000101

Weight Summary, kg (lb)

Pilot Control Module (CVG***)

Model Type	Description	
CVGC-3	Relief module: P-T	1,3 (2.9)
CVGCA-3	Relief module: A-T	1,3 (2.9)
CVGCPA-3	Relief module: P & A-T	1,3 (2.9)
CVGMS1-3	Shuttle module: P-T	1,0 (2.2)
CVGPC1-3	Pilot operated check valve	1,0 (2.2)
CVGS1-3	Shuttle valve	1,0 (2.2)

Pilot Valves

Model type "U" coils	
DG4V-3	
DC coil(s):	
Single solenoid valve	1, 6 (3.5)
Double solenoid valve	2, 2 (4.8)
AC coil(s):	
Single solenoid valve	1, 5 (3.3)
Double solenoid valve	1, 8 (4.0)
Proportional pilot valves	
KCG-3	1, 7 (3.8)

Weight of complete cartridge assembly is obtained by summing the separate values for cartridge parts and cover assembly.

Units

CVU-EFP1: See page 87
CVU-63-OD11: Contact your Danfoss-Vickers representative
CVU-(Z)SWD(3): See page 92

Inserts

Vickers by Danfoss inserts are field serviceable when serviced by Danfoss personnel. Springs, seals, spools and poppets are available as defined in Danfoss service and spares literature.

Covers

All covers are field serviceable providing that correct parts and test facilities are available. Contact your Danfoss representative for further details.

Units

See individual service and repair policies, available from your Danfoss representative.
